EEC FILES: INTRODUCTION

17

Labs announced participation

16

Labs delivered data

1

Lab (Lab B) has withdrawn its data from emission evaluation

75

EEC Files delivered

160

MByte of Data

203000

Data lines analysed

- EEC Files: brake Event-based files
 - are derived from time-based EED files
 - Contain data from bedding and emission cycles
 - Should contain 303 data lines per cycle
 - 1 data line = data for one of the 303 brake events

■ Software Tools used

- R: for data agglomeration and analysis
- Tableau: for visualization

EEC TEAM: FIRST STEPS & FINDINGS

First EEC-Files with Version 0

▪ Main Issues:

- Header lines different to example file
- Header sections missing
- Leading blank lines deleted / structure changed
- Naming of Excel tabs no unique
"Bedd. 1" vs. "Bed.1" etc
- Data strategy for missing data or not connected sensors
different for different labs
=> Air temp or air speed = -40 °C
- Big variance in data strategy for Columns A...C
"Sect #", "Stop #", "brake_data_begin Stop"
- Missing bedding or emissions measurements

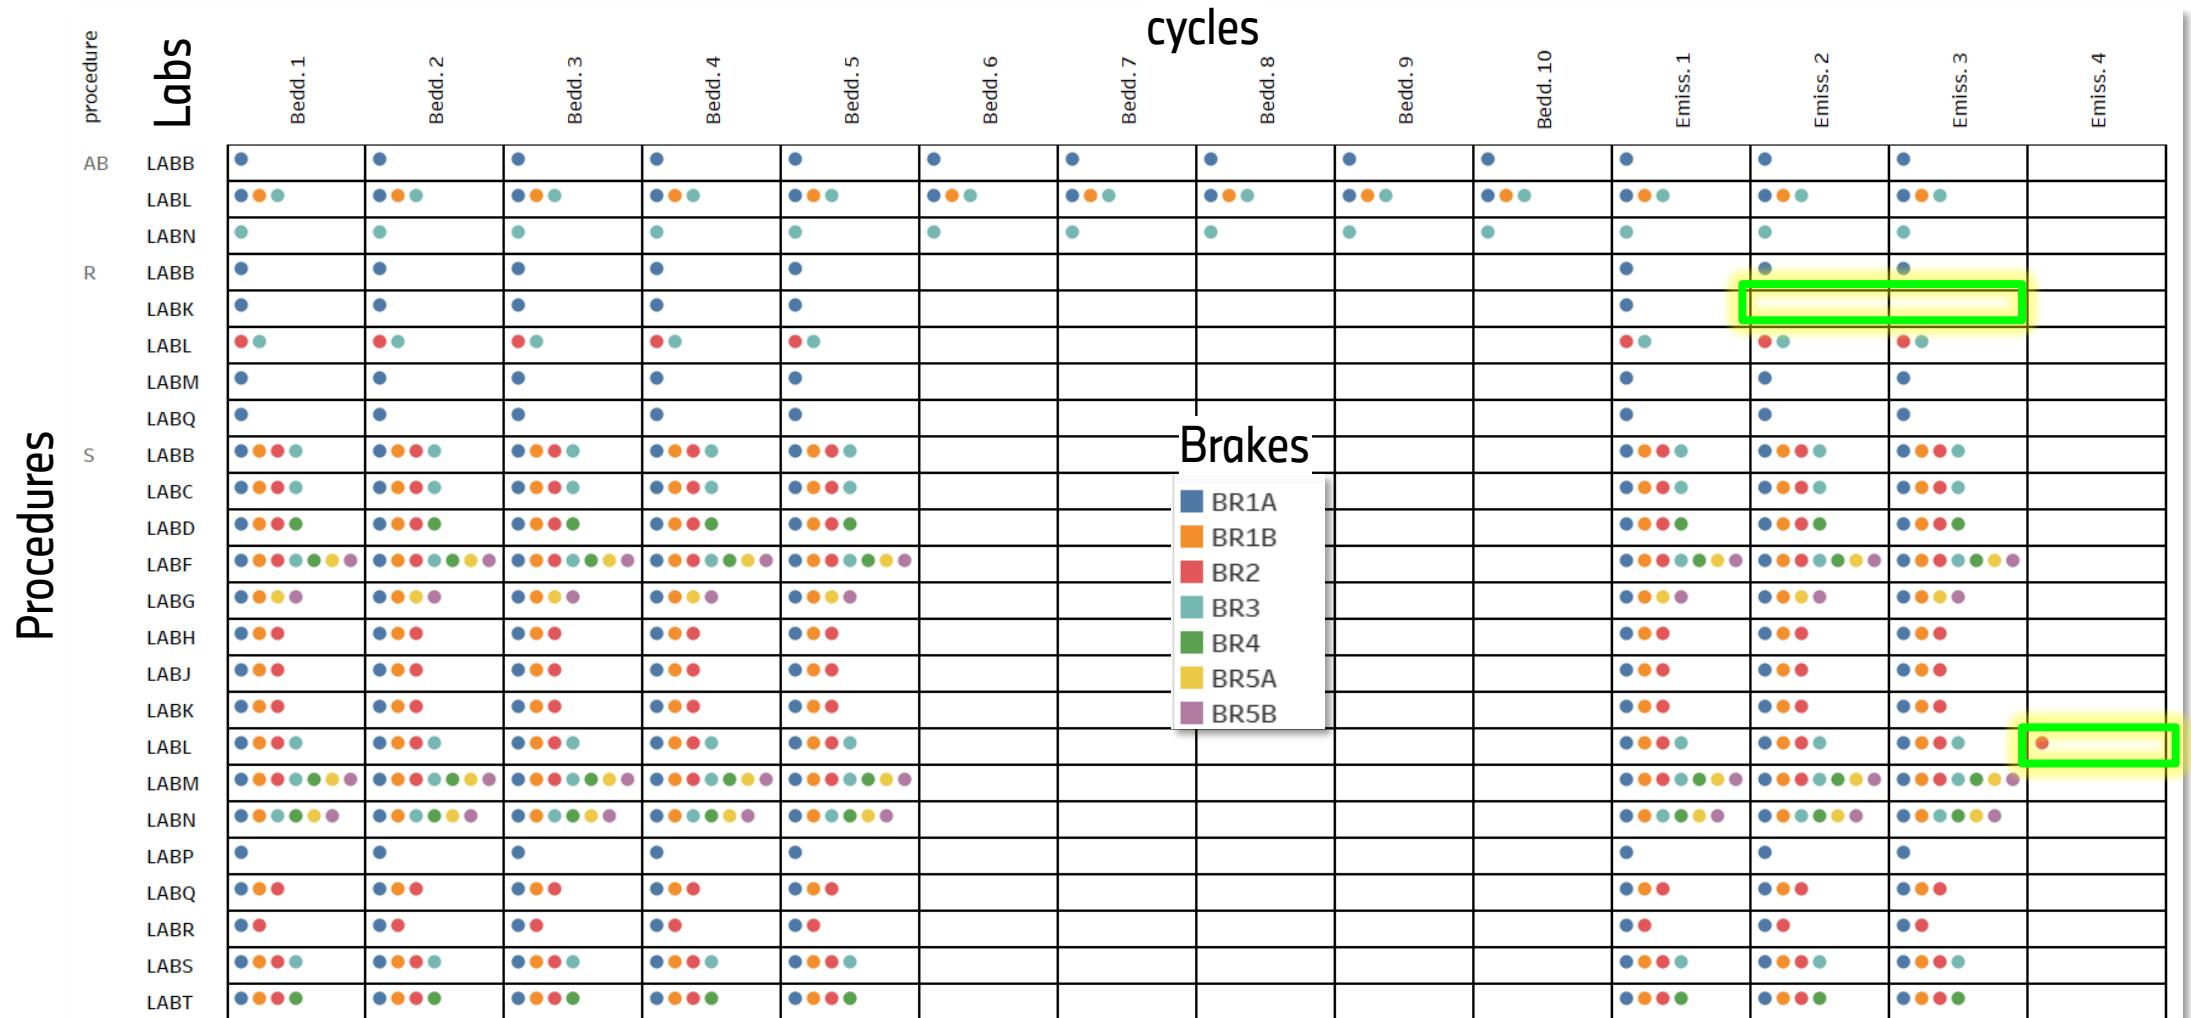

- New file versions V1, V2... created in close exchange with labs and Theo, mostly done by Theo

EEC FILES: DATA DELIVERED

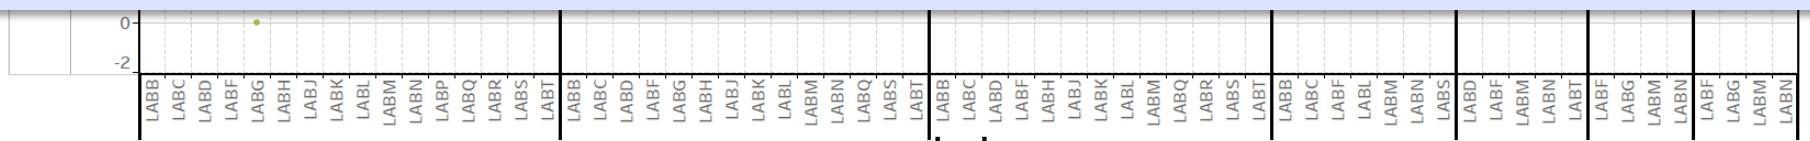

- 75 EEC Files received
 - Equal amount of files from all labs had to be revised:
 - cooling sections removed to create the revised versions (V1 / V2... V5).
 - Additionally, negative and zero values were removed and substituted by empty cells not to compromise the statistical analysis.

EEC FILES: AIR TEMPERATURES PER LAB

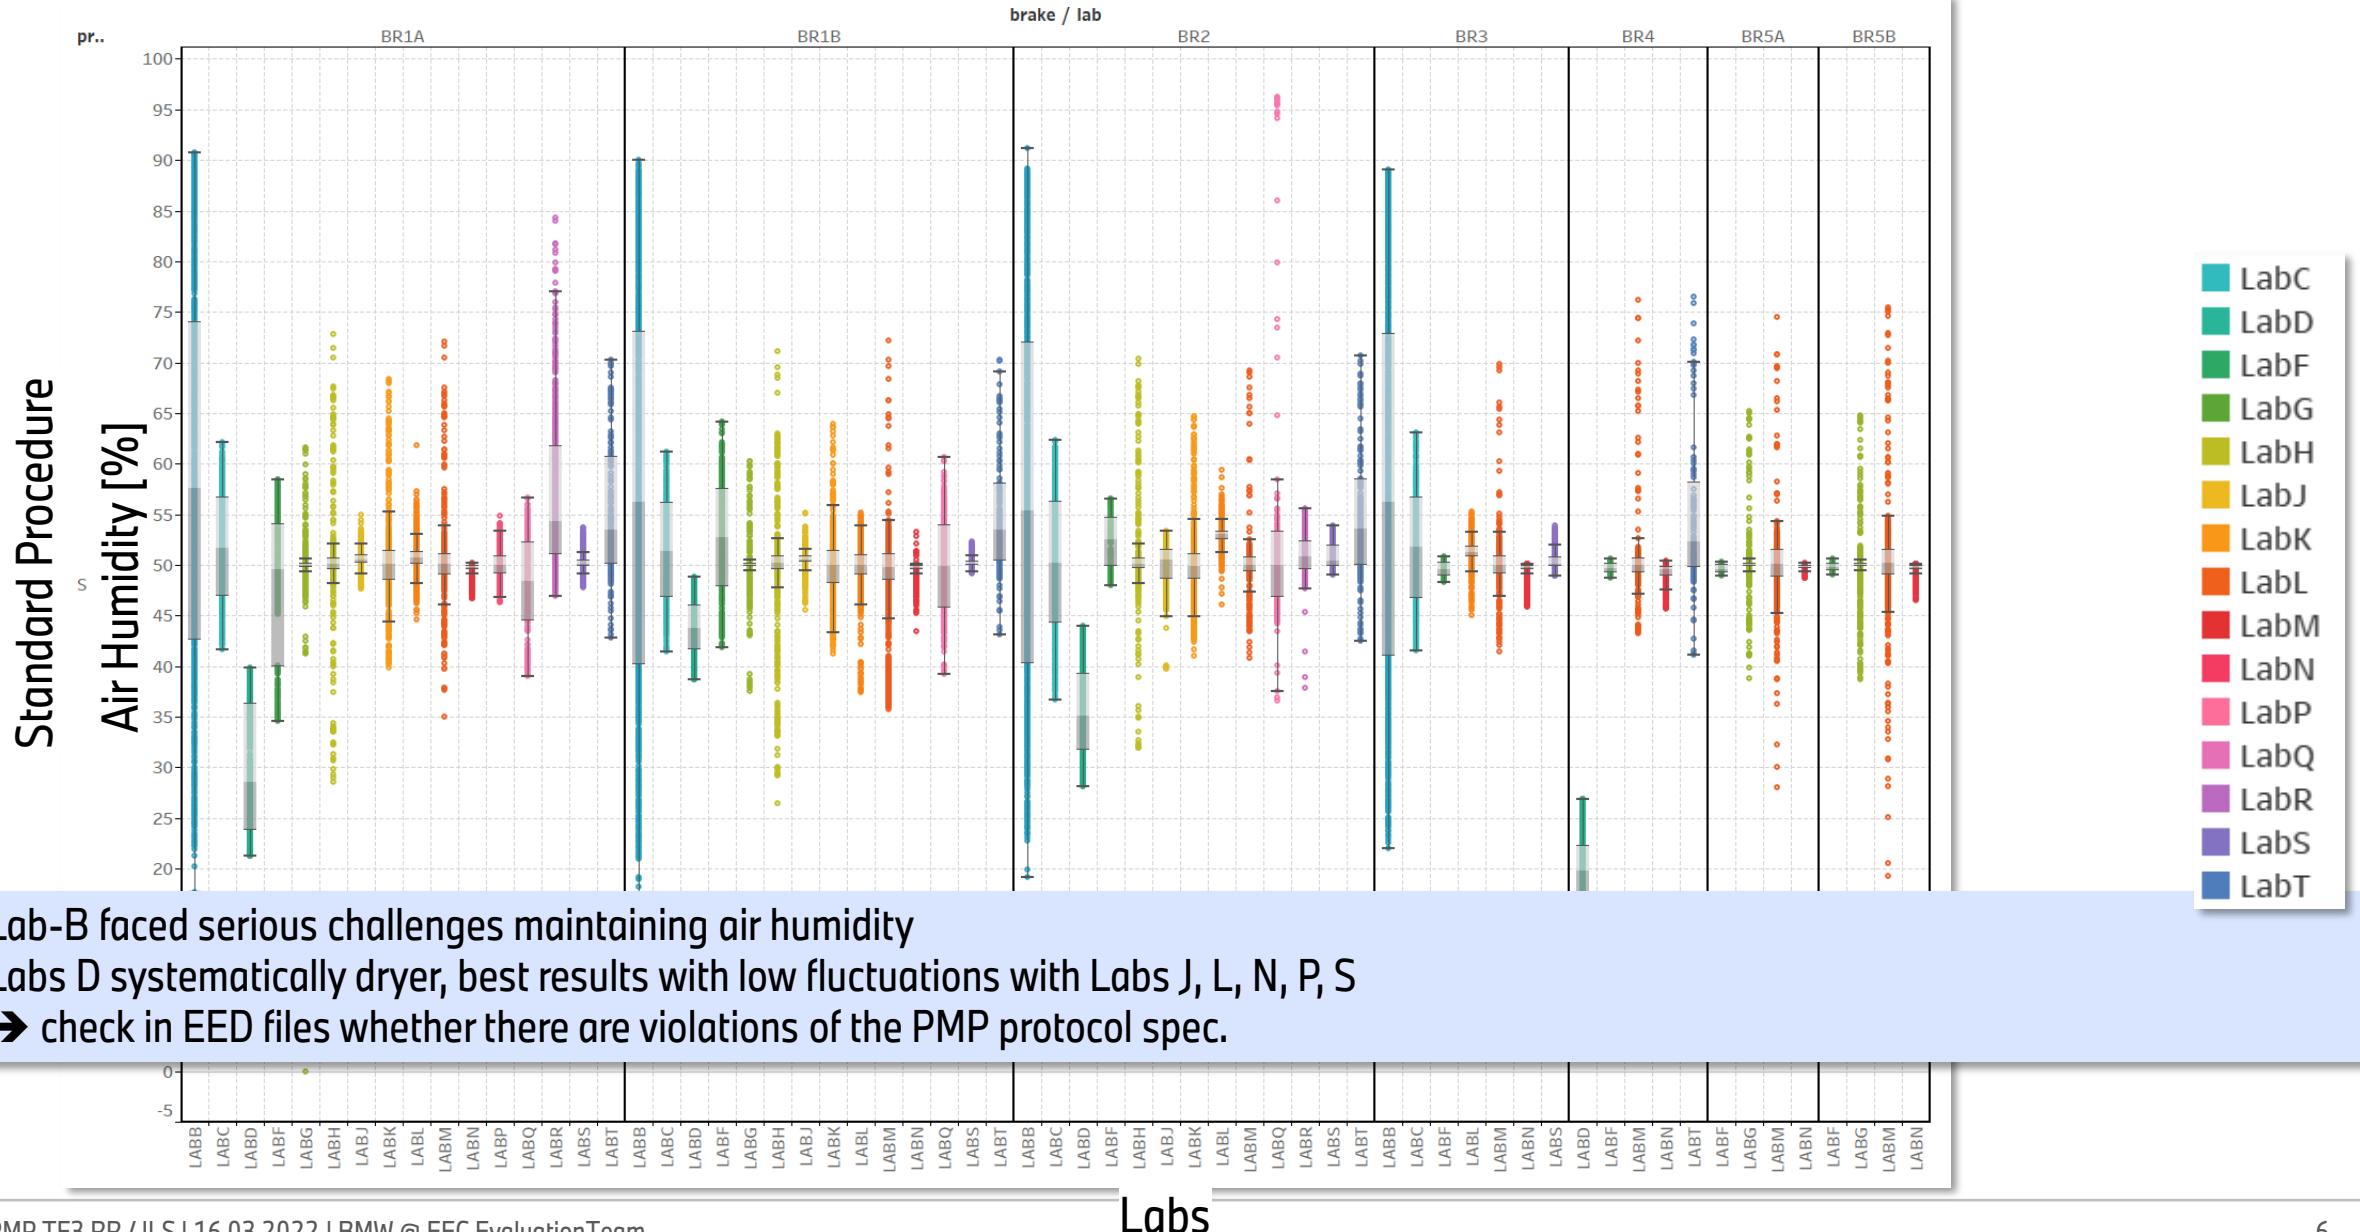

- Lab-B faced serious challenges maintaining a target temperature
- Labs C, D, H, M, and T showed some fluctuations
- check in EED files whether there are violations of the PMP protocol spec.

20 °C

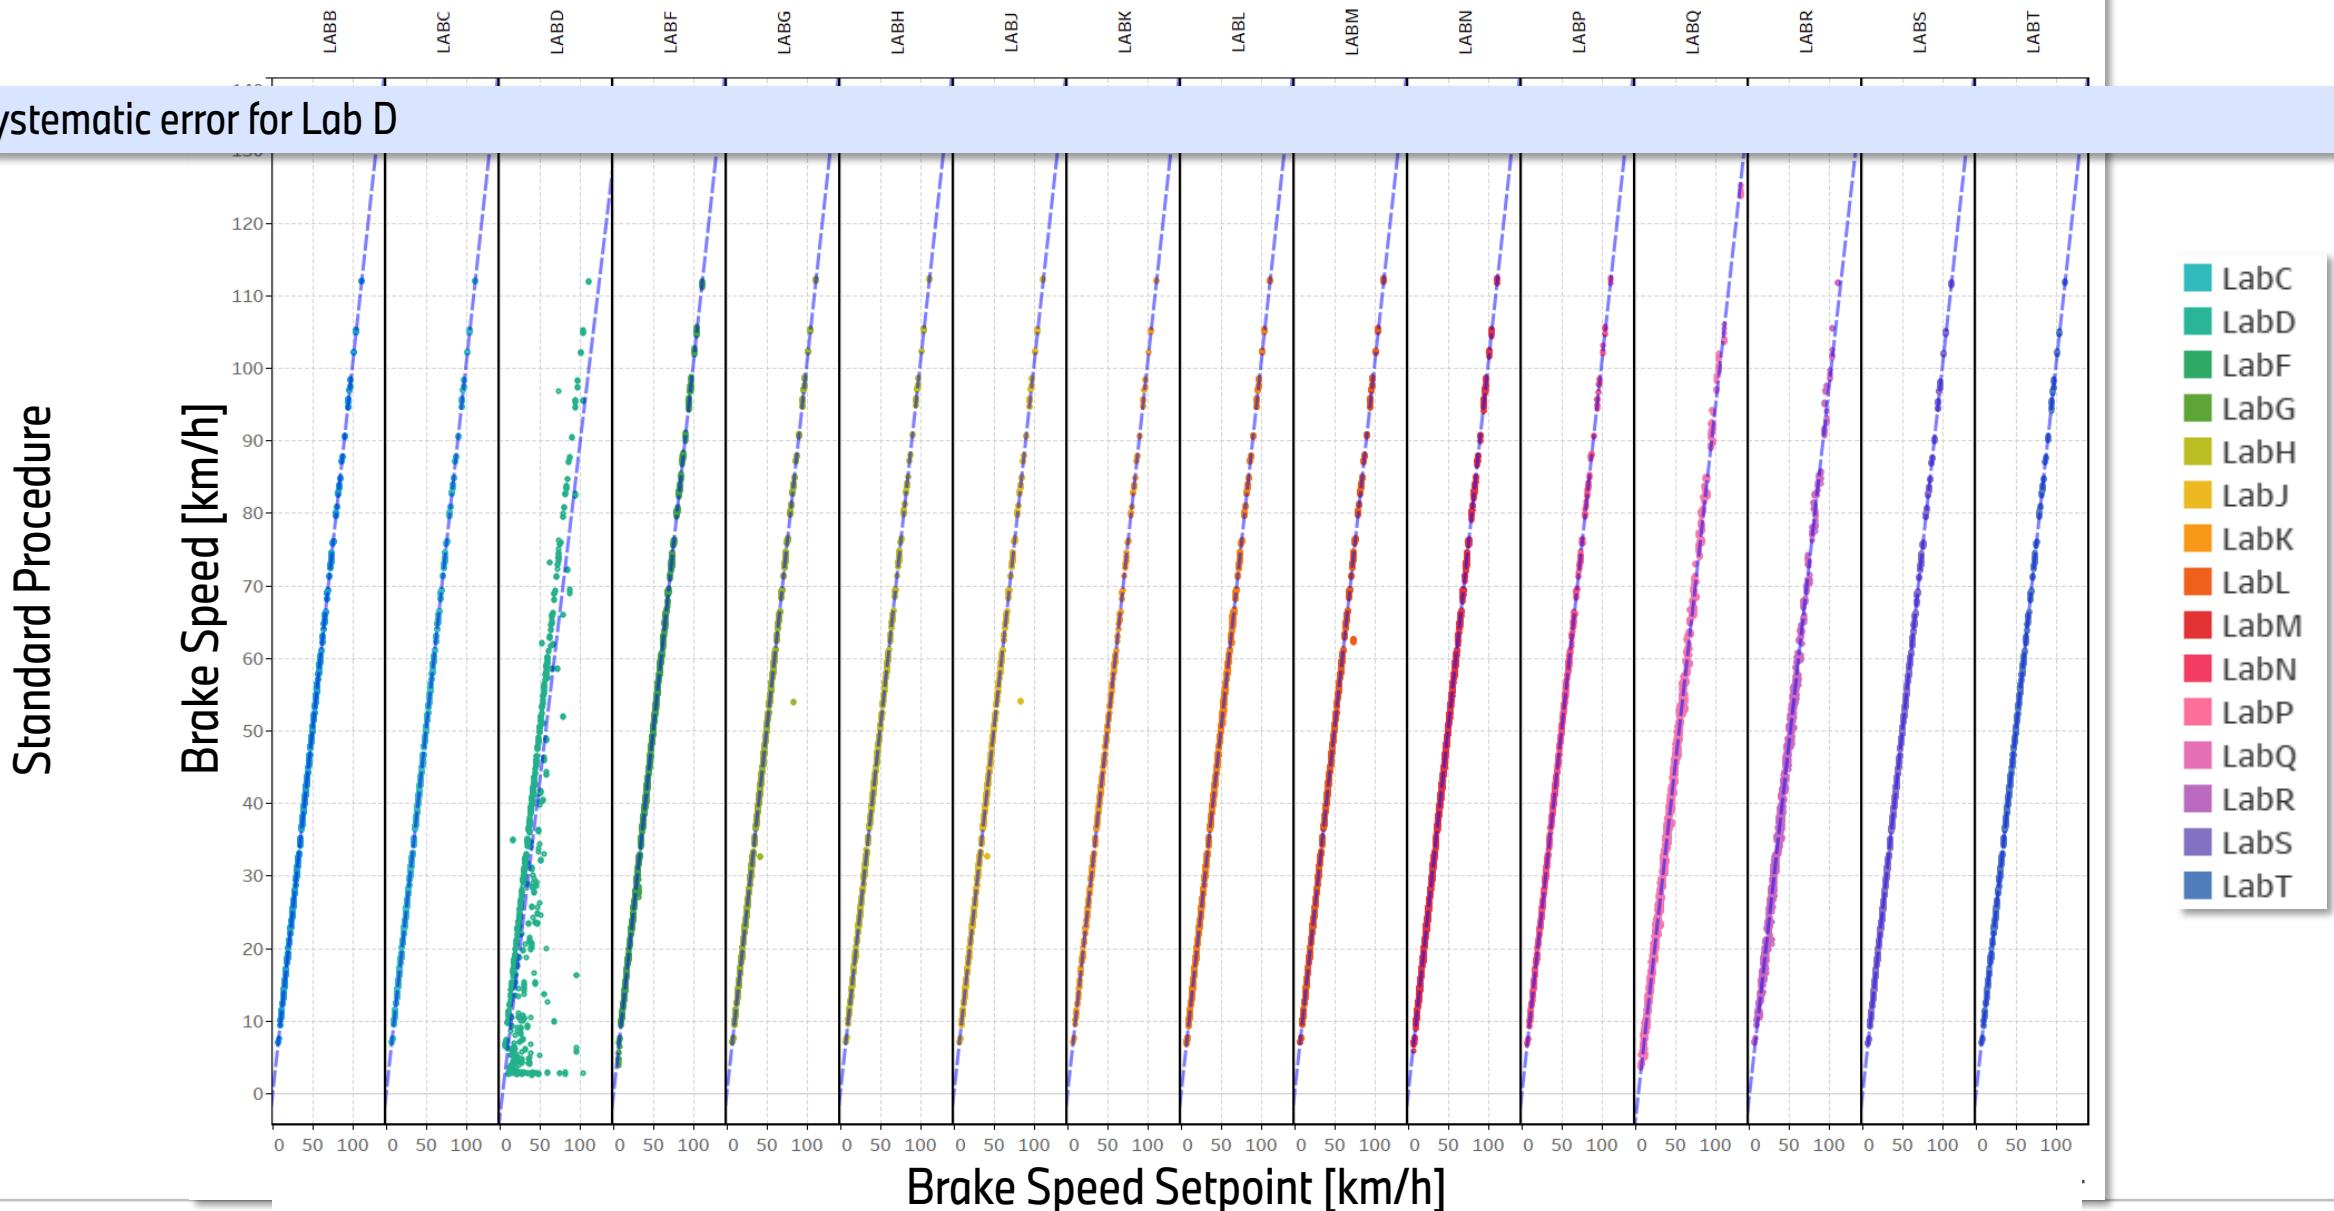

EEC FILES: AIR HUMIDITY

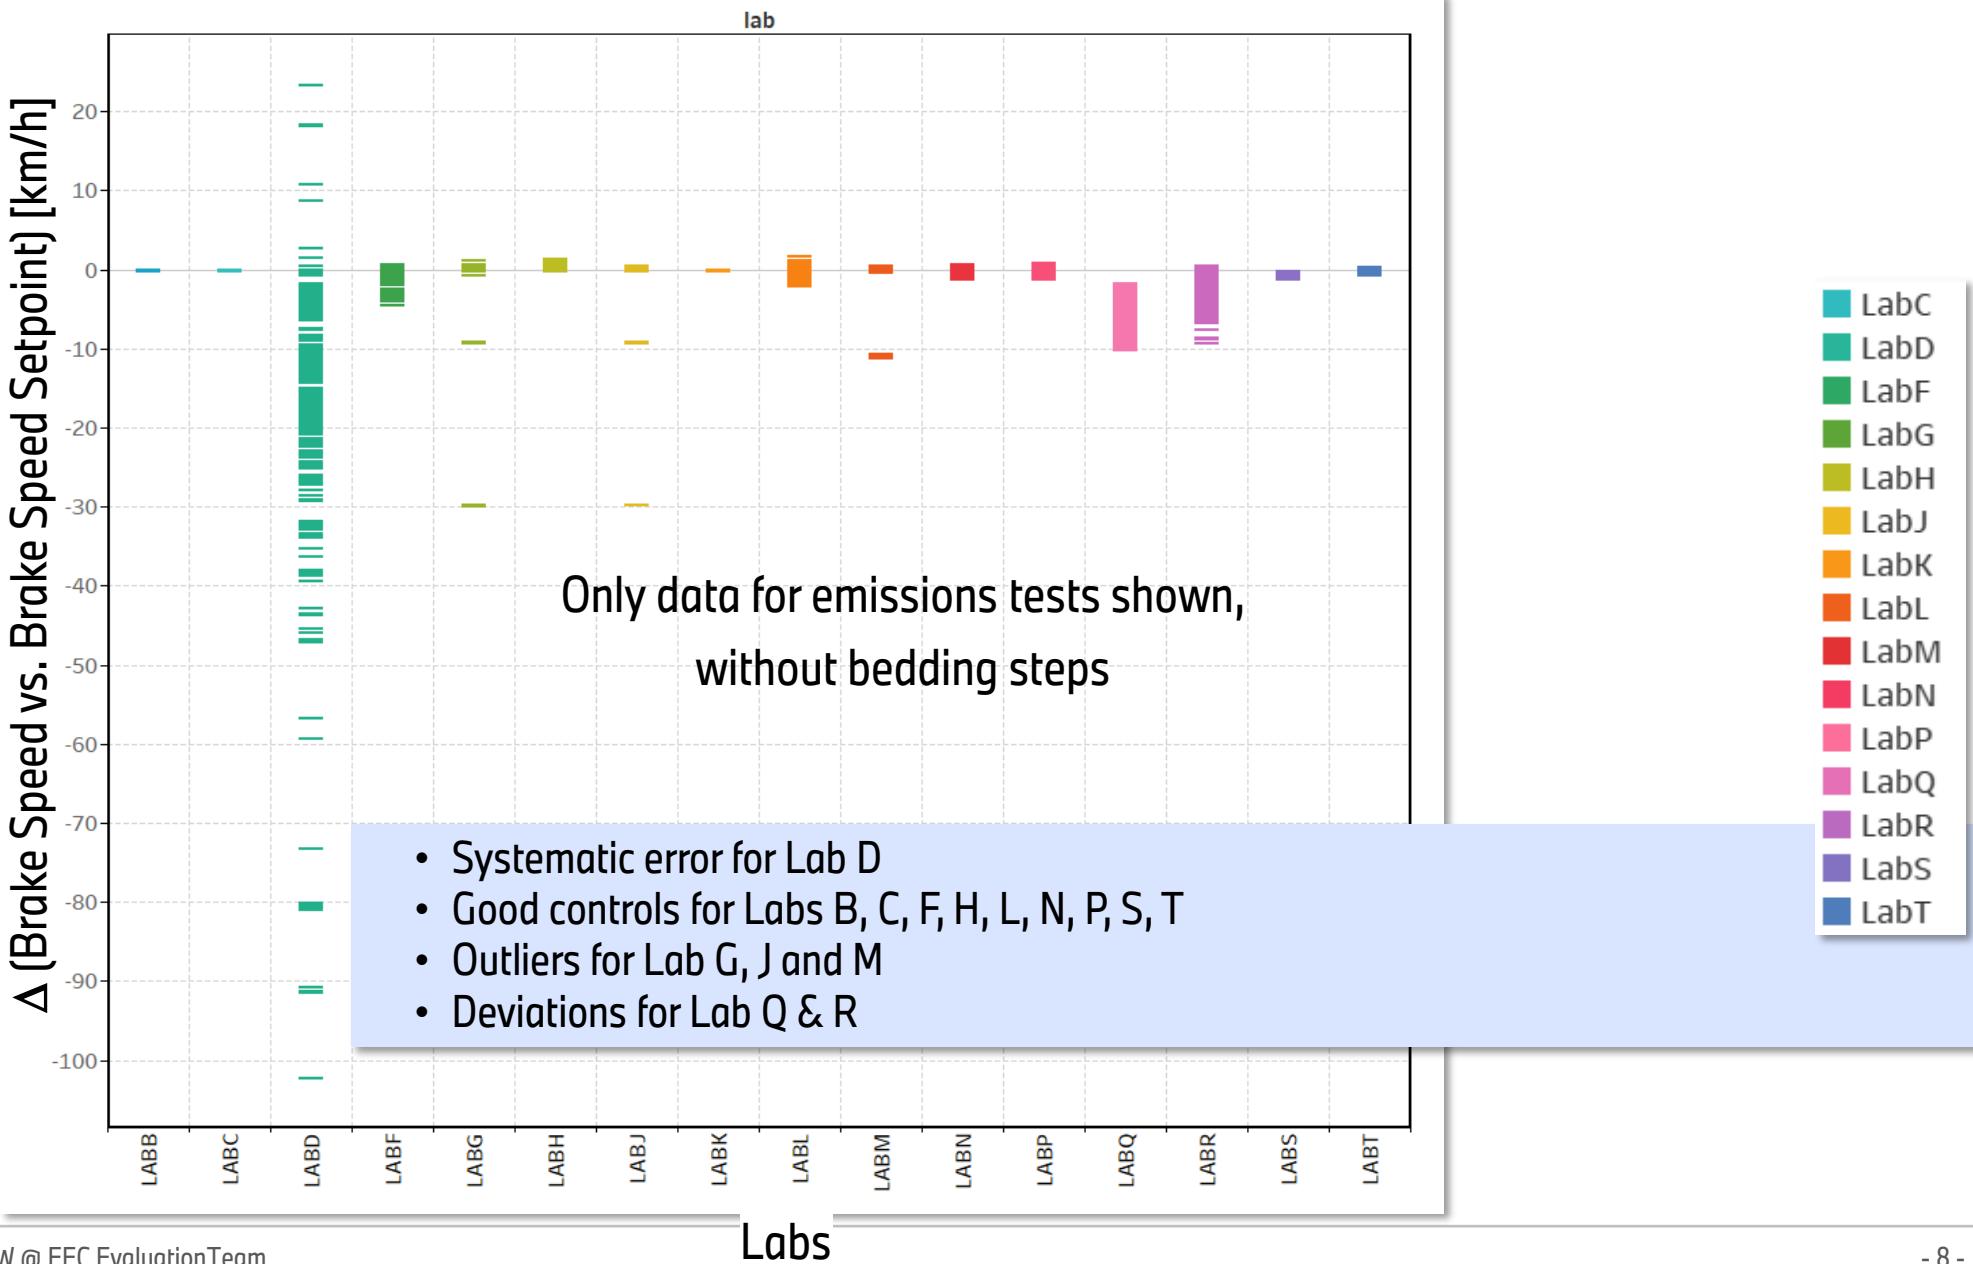

EEC FILES: CORRELATION OF BRAKE SPEED PROFILE VS. SETPOINT (1)

- Systematic error for Lab D

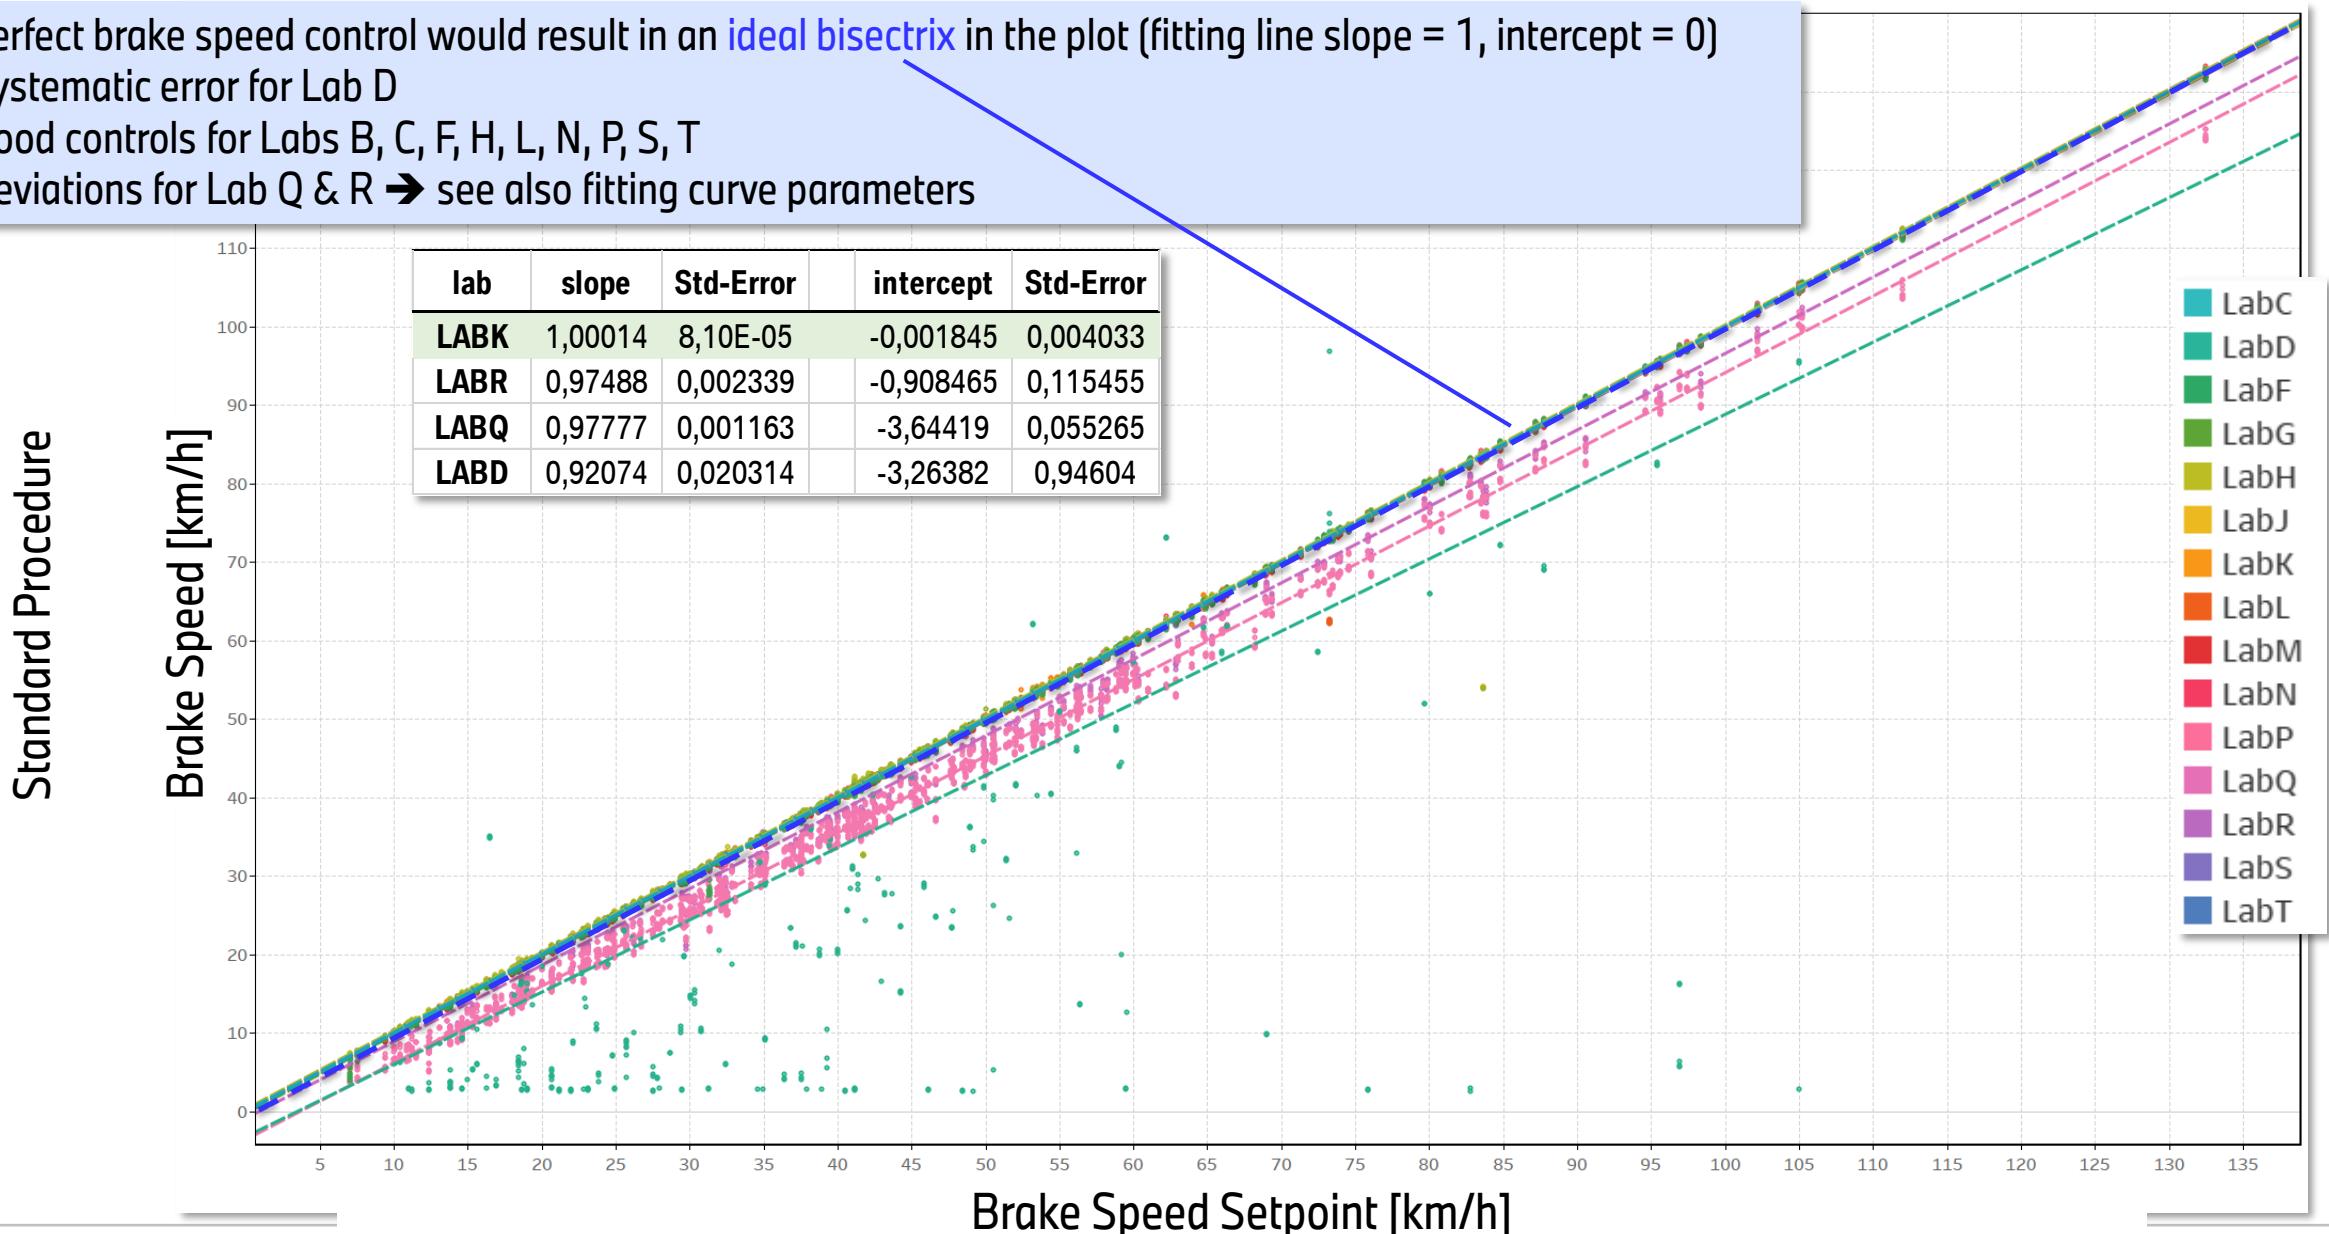

EEC FILES: CORRELATION OF BRAKE SPEED PROFILE VS. SETPOINT (2)

Standard Procedure

EEC FILES: CORRELATION OF BRAKE SPEED PROFILE (3)

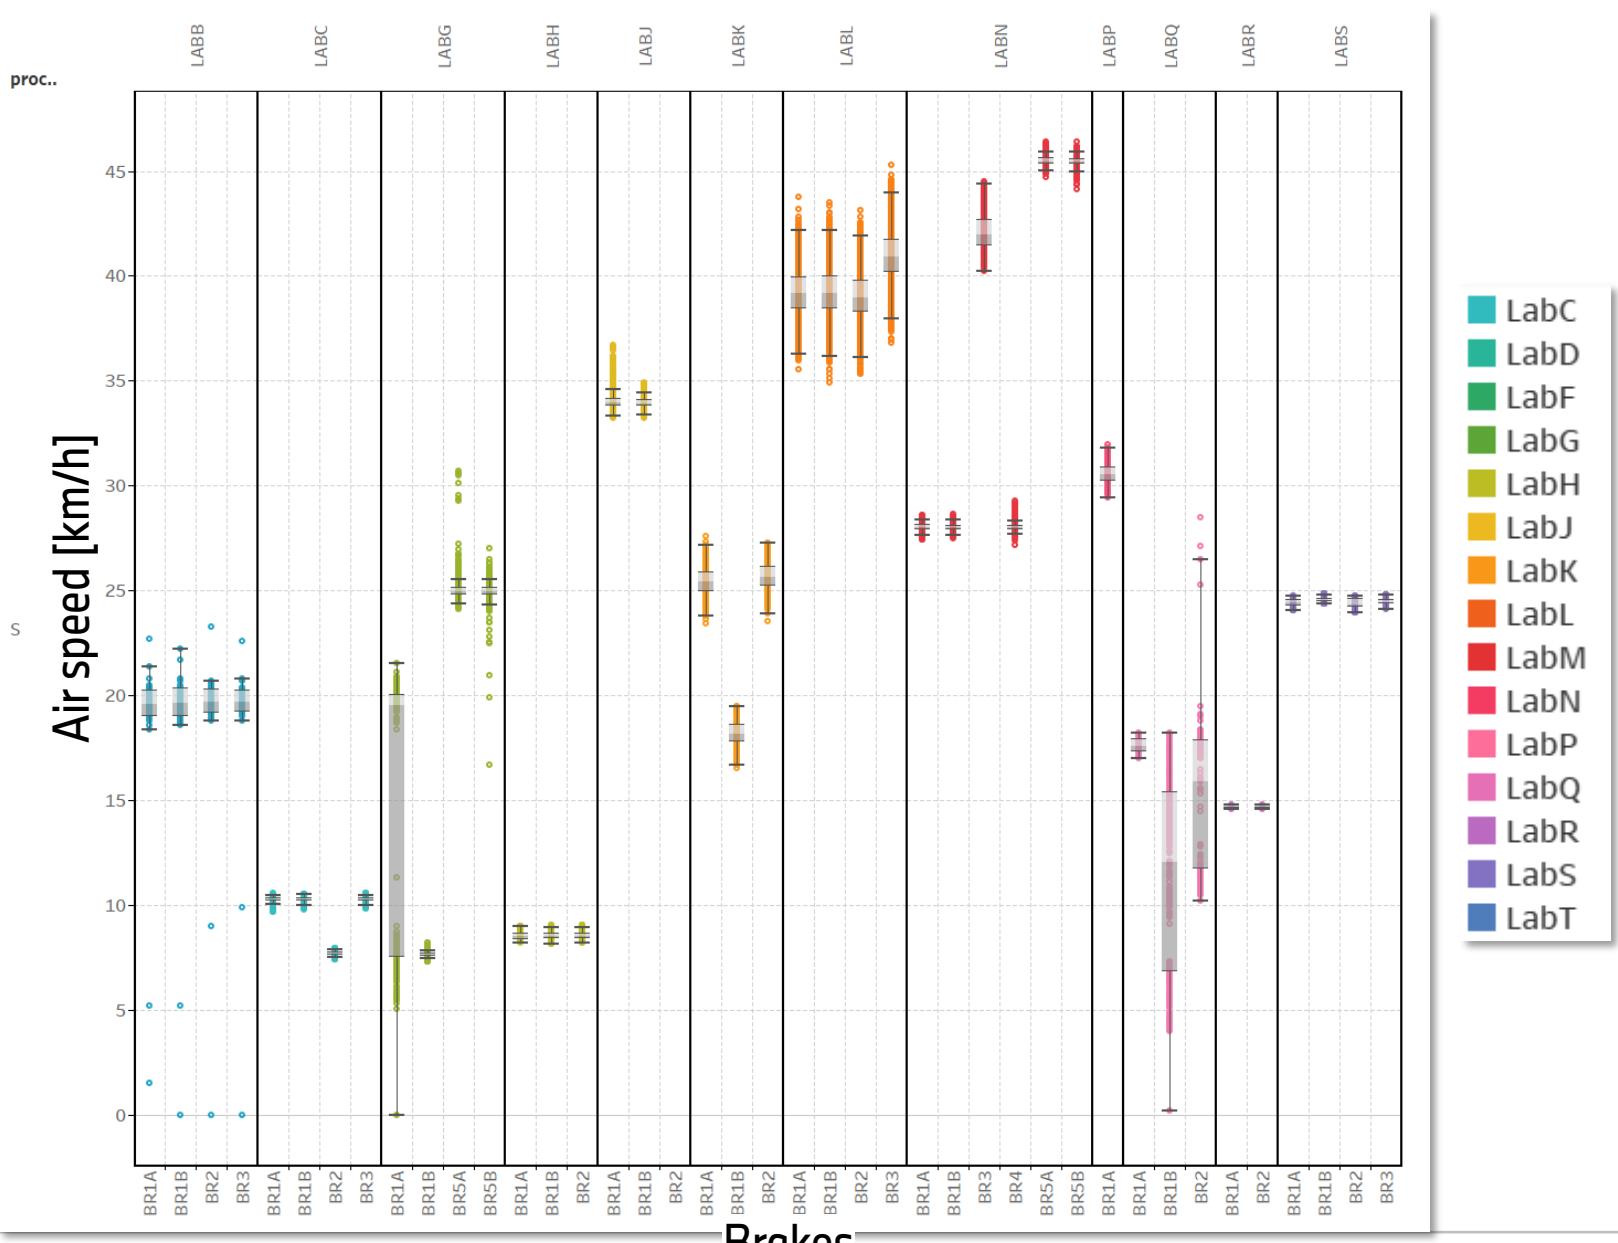

- Perfect brake speed control would result in an **ideal bisectrix** in the plot (fitting line slope = 1, intercept = 0)
- Systematic error for Lab D
- Good controls for Labs B, C, F, H, L, N, P, S, T
- Deviations for Lab Q & R → see also fitting curve parameters

EEC FILES: AIR SPEED

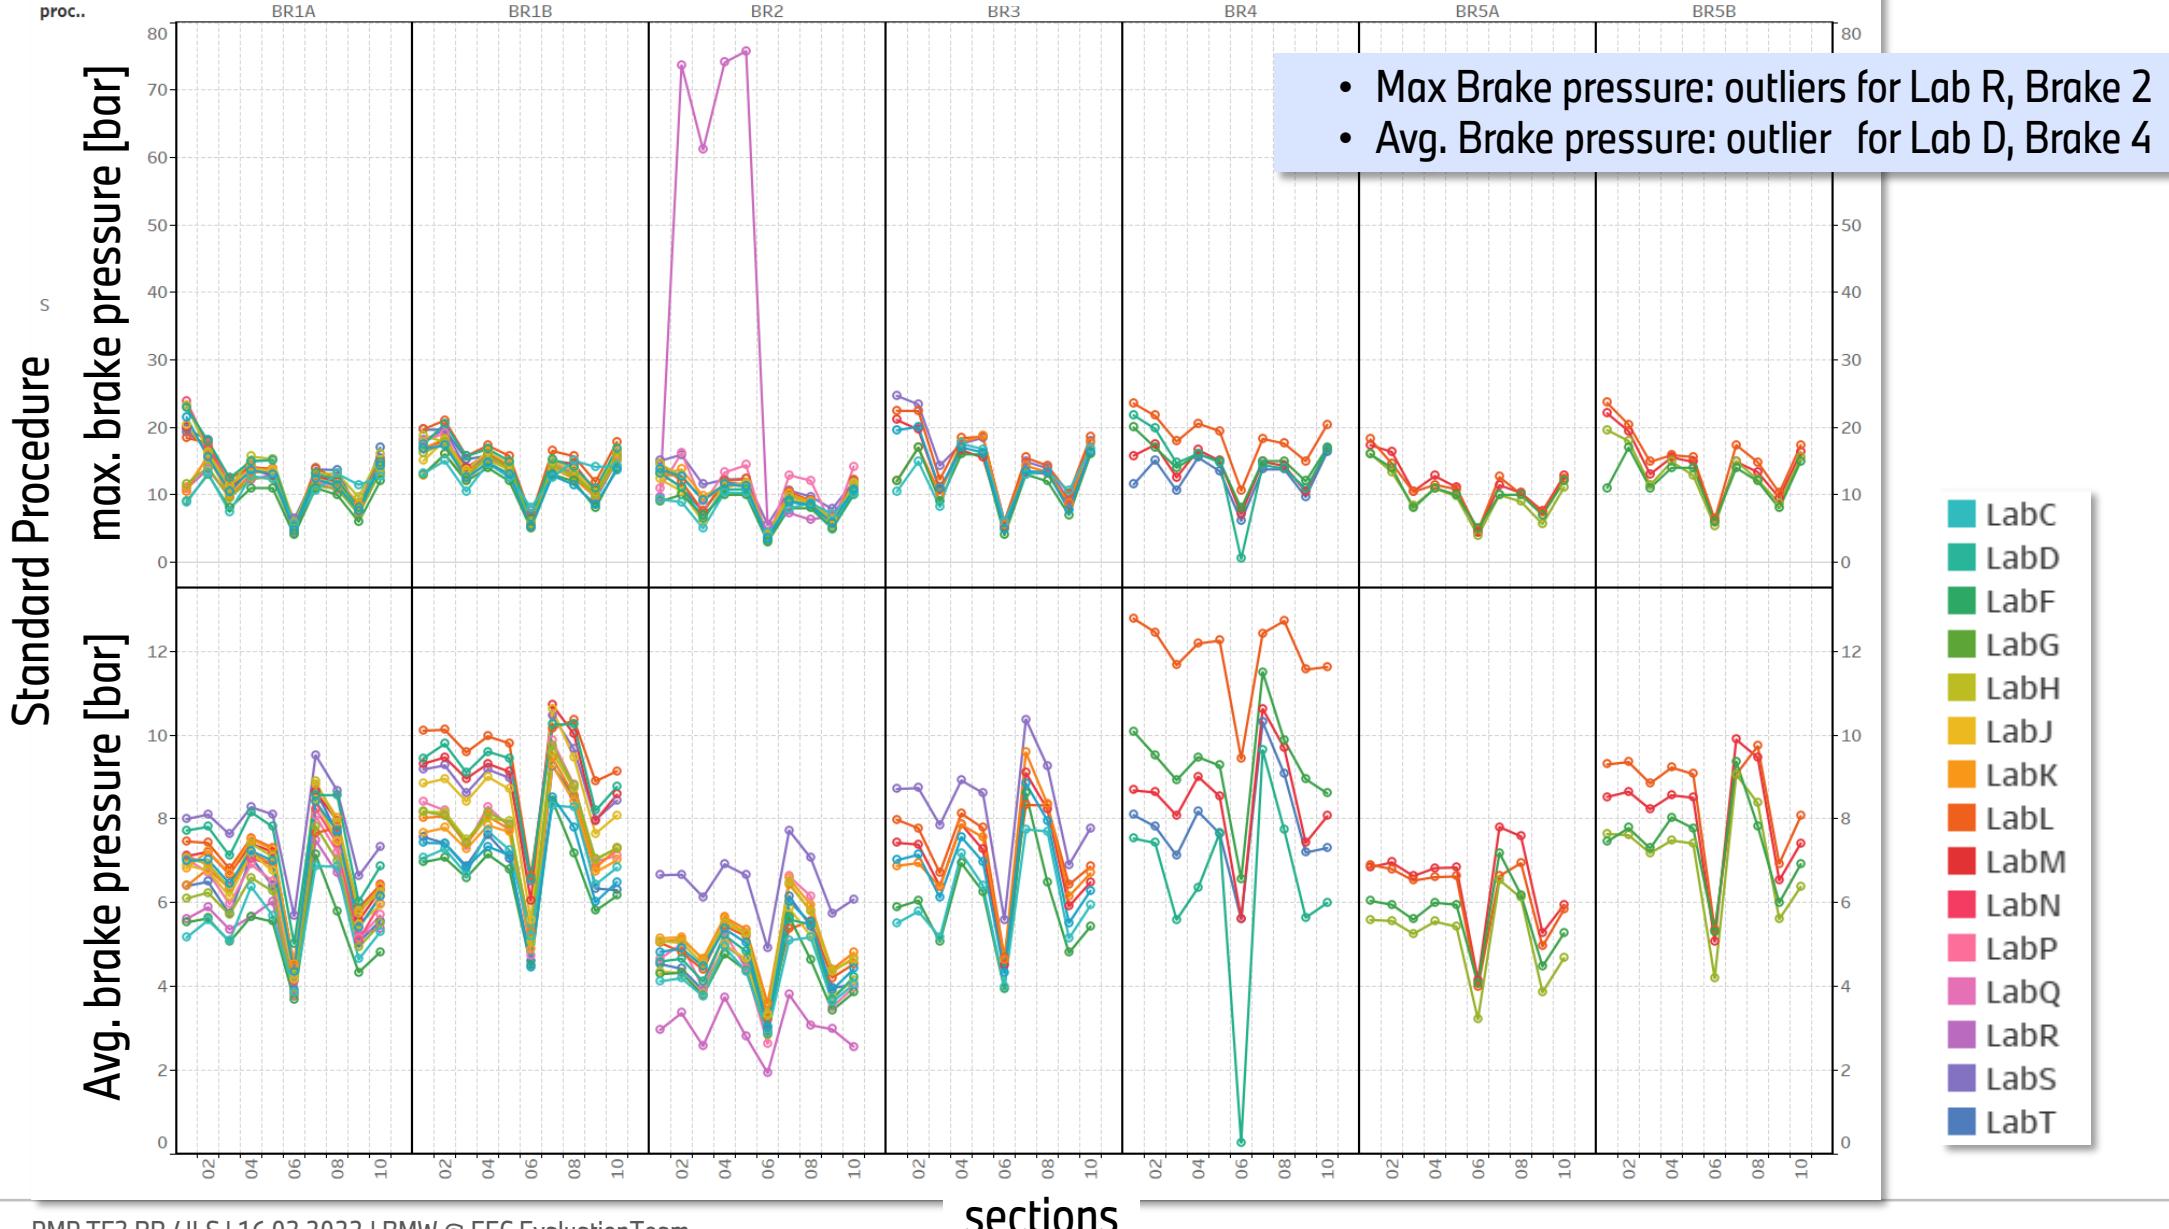

- Deviations for Lab B
- High variations for Lab G & Q
- Bigger variations for Lab L

Standard Procedure

EEC FILES: BRAKE PRESSURES

Brakes

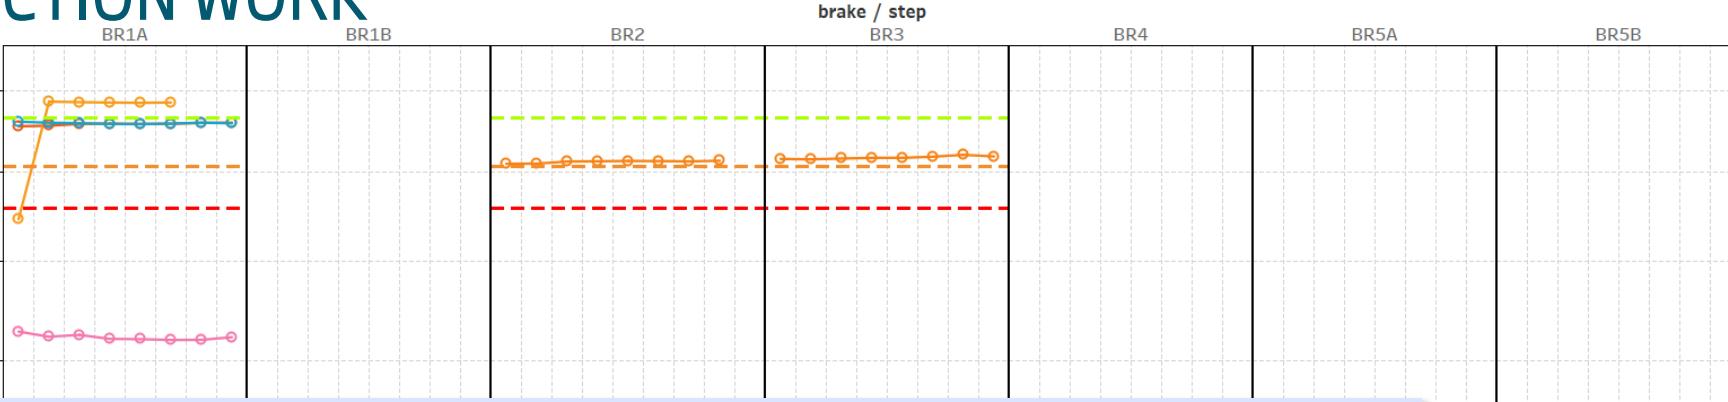

EEC FILES: FRICTION WORK

procedure

R

Friction Work [J/kg]

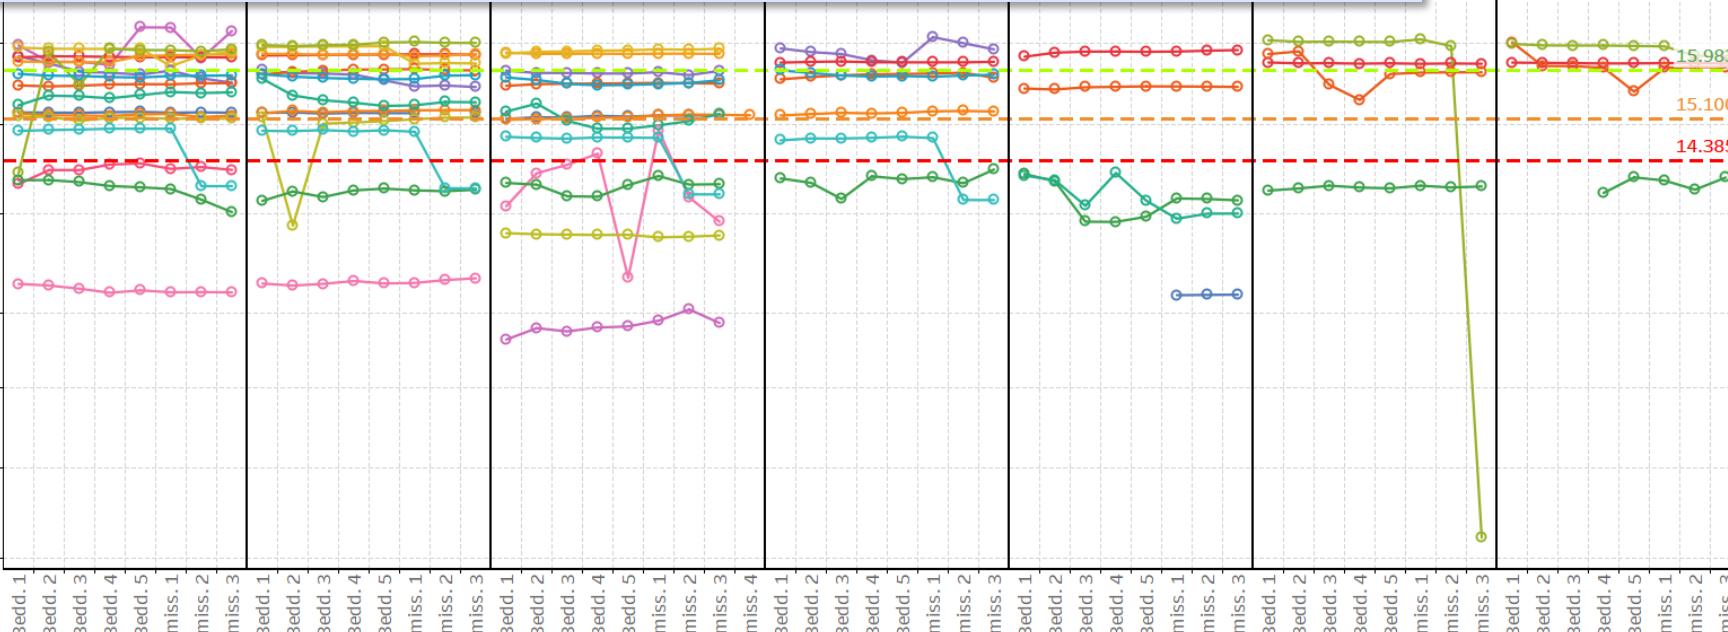

- Some labs above theoretical value of 15.983 J/kg: Labs G, J, K, (M), N, R, S
- Some labs in 5 % range deviation: Labs B, D, (H), L, M, (S), T
- Some labs n 10 % range deviation: Lab C, (D), H, (Q)
- Labs > 10 % of range deviation: Lab (C), F, (G), (H), P, Q, (R), (T)

S

Standard Procedure

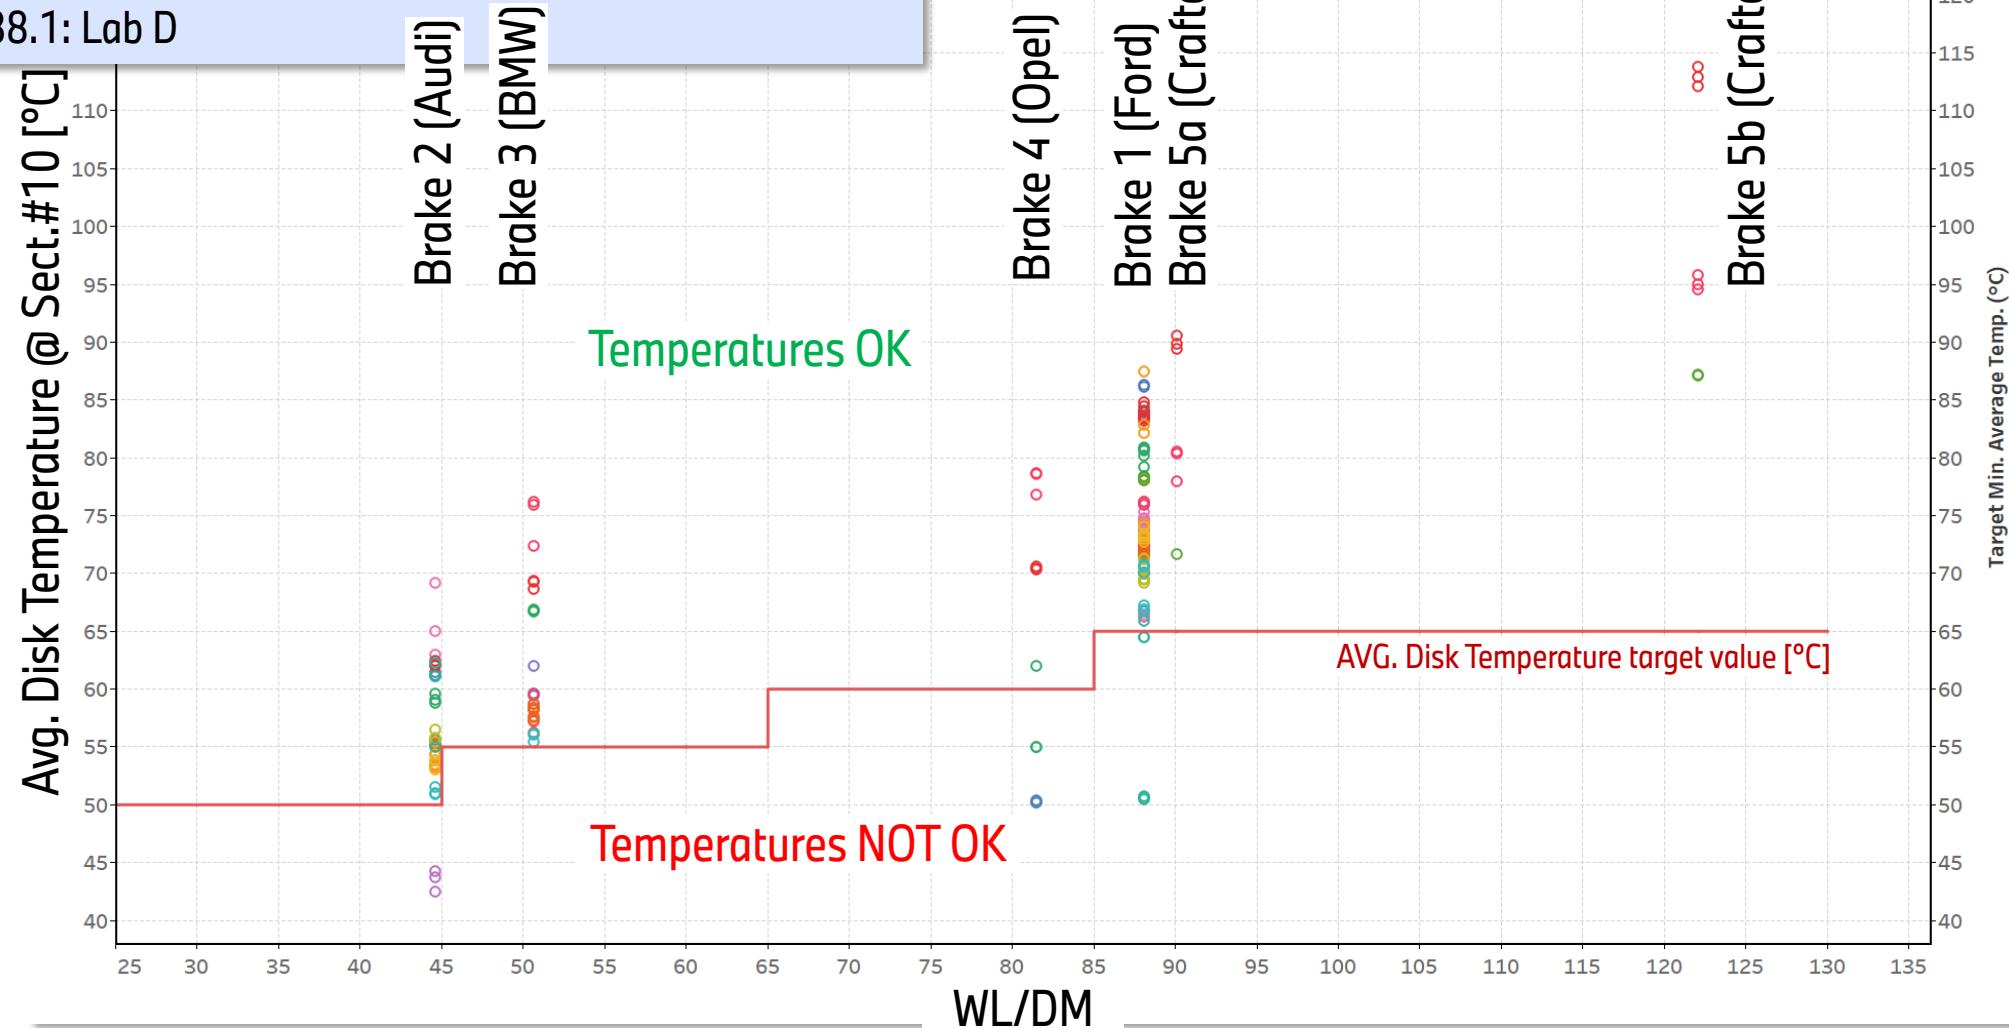

Friction Work [J/kg]

Nominal value

EEC-FILES: AVERAGE DISK TEMPERATURES OF SECTION #10

- Some labs below target value of min. temperature
 - For WL/DM 44.6: Lab R,
 - WL/DM 81.5: Lab F & T
 - WL/DM 88.1: Lab D

EEC-FILES: DISK TEMPERATURES: FBT

- few labs below target value of min. FBT temperature
 - WL/DM 88.1: Lab R
- several labs above target value of max. FBT temperature
 - WL/DM 81.5: Lab M & N
 - WL/DM 90.1: Lab F & M
 - WL/DM 122.1: All measurements! Lab F, G, M, N**
