# Summary of 10<sup>th</sup> VMAD-IWG

SG1a reported outcome of SG1a. Following points remained unsolved.

1. How to proceed literature review
2. Identifying definitions of terms (e.g. edge case)
3. Start to develop draft inventory of functional scenarios
4. Update SG1a concept paper (issue related to “random sampling” and “3 layer concept”)

SG1a was requested to discuss again these issues. Therefore, SG1a meeting was held on 24<sup>th</sup> August. Following slides describe outcome of meeting.

# Literature review

Literature review was agreed to proceed at 10<sup>th</sup> IWG.  
SG1a discussed how to proceed.

SG1a agreed that

- Use table proposed by Canada
- OICA will fill the table by mid September.

# Definition

During 10<sup>th</sup> IWG, there was misunderstanding of the word “edge case” and SG1a was requested to decide.

SG1a agreed that

- Definition of “edge case” and “corner case” based on Canada proposal.
- The word used by Japan has different meaning, therefore, appropriate wording is requested.

# Start to develop draft inventory of functional scenarios

During 10<sup>th</sup> IWG, SG1a reported that highway use should be prioritized. SG1a was requested to discuss further.

SG1a agreed that

- SG1a will work on this item after judgement of VMAD-IWG.
- Proposal of proceeding way is requested to SG1a members.

# Update SG1a concept paper

Issue regarding “random sampling (concern of overfitting to certain condition)” and “3 layers (identify scenario by classification of perception, decision making, manoeuver)” was remaining issue after 10<sup>th</sup> VMAD-IWG.

SG1a agreed that

- “Random sampling” issue is premature to discuss and wait for outcome of other SGs and FRAV.
- “3 layers” issue is premature to decide now.

# Questions & Comments?

**Thank you and stay safe!**
