# DETA Unique Identifier

Unique Identifier usages:

- For each new type approval (document) created in DETA, a UI will be created automatically.
- A UI can be created for a single type approval that does not yet have a connected UI.
- A UI can be created for a combination of type approvals in DETA.
- Each UI will be represented by a number that is unique in the system. This numbering shall start at 1 and there will be no leading zeroes.

Unique Identifier attributes:

- Unique Identifier number
- Creating approval authority
- Description
- Creation Date

DETA Unique Identifier

Implementation:

- The UIs for type approvals will be showed in the table of documents like other attributes.

- Search type approvals for a given UI – integrated in the DETA tab.

- One approval can be assigned to different UIs.

- Some reports will be available. They will contain a list of the UIs generated.

Create an extension:

- New functionality "Create extension".

- It would be like copying a document with an additional checkbox to decide whether a new UI is needed or keep the original UI from the document.

- If the document has no UI, a new one will be created.
