

How to define the UBE_{certified} ?

UBE_{certified}

(1) shall be one value per each interpolation family

(2) shall NOT be declared by manufacture because

lower value : manipulate the MPRI

higher value : may obtain unfair bonus if this number is used for incentive scheme

(3) shall be aligned from “measured value” to “certified value”

i.e. apply adjustment factor (← for determining phase PER)

(4) shall be selected according to one of the followings in case of multiple testing

(i) average (X_{V_H} , X_{V_M} , X_{V_L})

(ii) maximum (X_{V_H} , X_{V_M} , X_{V_L})

(iii) minimum (X_{V_H} , X_{V_M} , X_{V_L})

then round to the nearest whole number

JPN proposal (worst case for durability requirement,
not so huge impact on incentive when applicable)

<sample> calculation process of the UBE_{certified}
