

ITS in the vehicles and in mobility

I - ADAS roll out and optimisation needs

II – ITS deployment

Conclusion

Several ADAS will be in EU vehicles by default

REGION I

Entry in force	Mandated technologies
6/07/2022	<p>New types</p> <ul style="list-style-type: none">• Intelligent speed assistance• Lane departure warning• Tyre pressure monitoring systems for cars (TPMS)• Advanced emergency braking systems for trucks and buses.
7/07/2024	<p>All of the above for all existing types</p> <ul style="list-style-type: none">• Emergency lane keeping systems• Tyre pressure monitoring systems for vans, trucks, and buses, Advanced emergency braking systems for cars and vans• Event data recorders

Study to maximise ADAS benefits

“An integrated multi-channel “driver-vehicle-infrastructure” approach is needed to embrace and increase the safety potential of ADAS.”

REPORT

How to maximize the road safety benefits of ADAS?

Client: Fédération Internationale de l'Automobile

Reference: BH3649-RHD-ZZ-XX-RP-Z-0001

Status: S1/P01

Date: 14-12-2020

UPDATE of the 23-10-2020 version
(only concerning Chapter 6)

TNO innovation
for life

HAN UNIVERSITY
OF APPLIED SCIENCES

**Royal
HaskoningDHV**
Enhancing Society Together

Advanced Emergency Braking

Intelligent Speed Assistance

Emergency Stop Signal

Adaptive Cruise Control

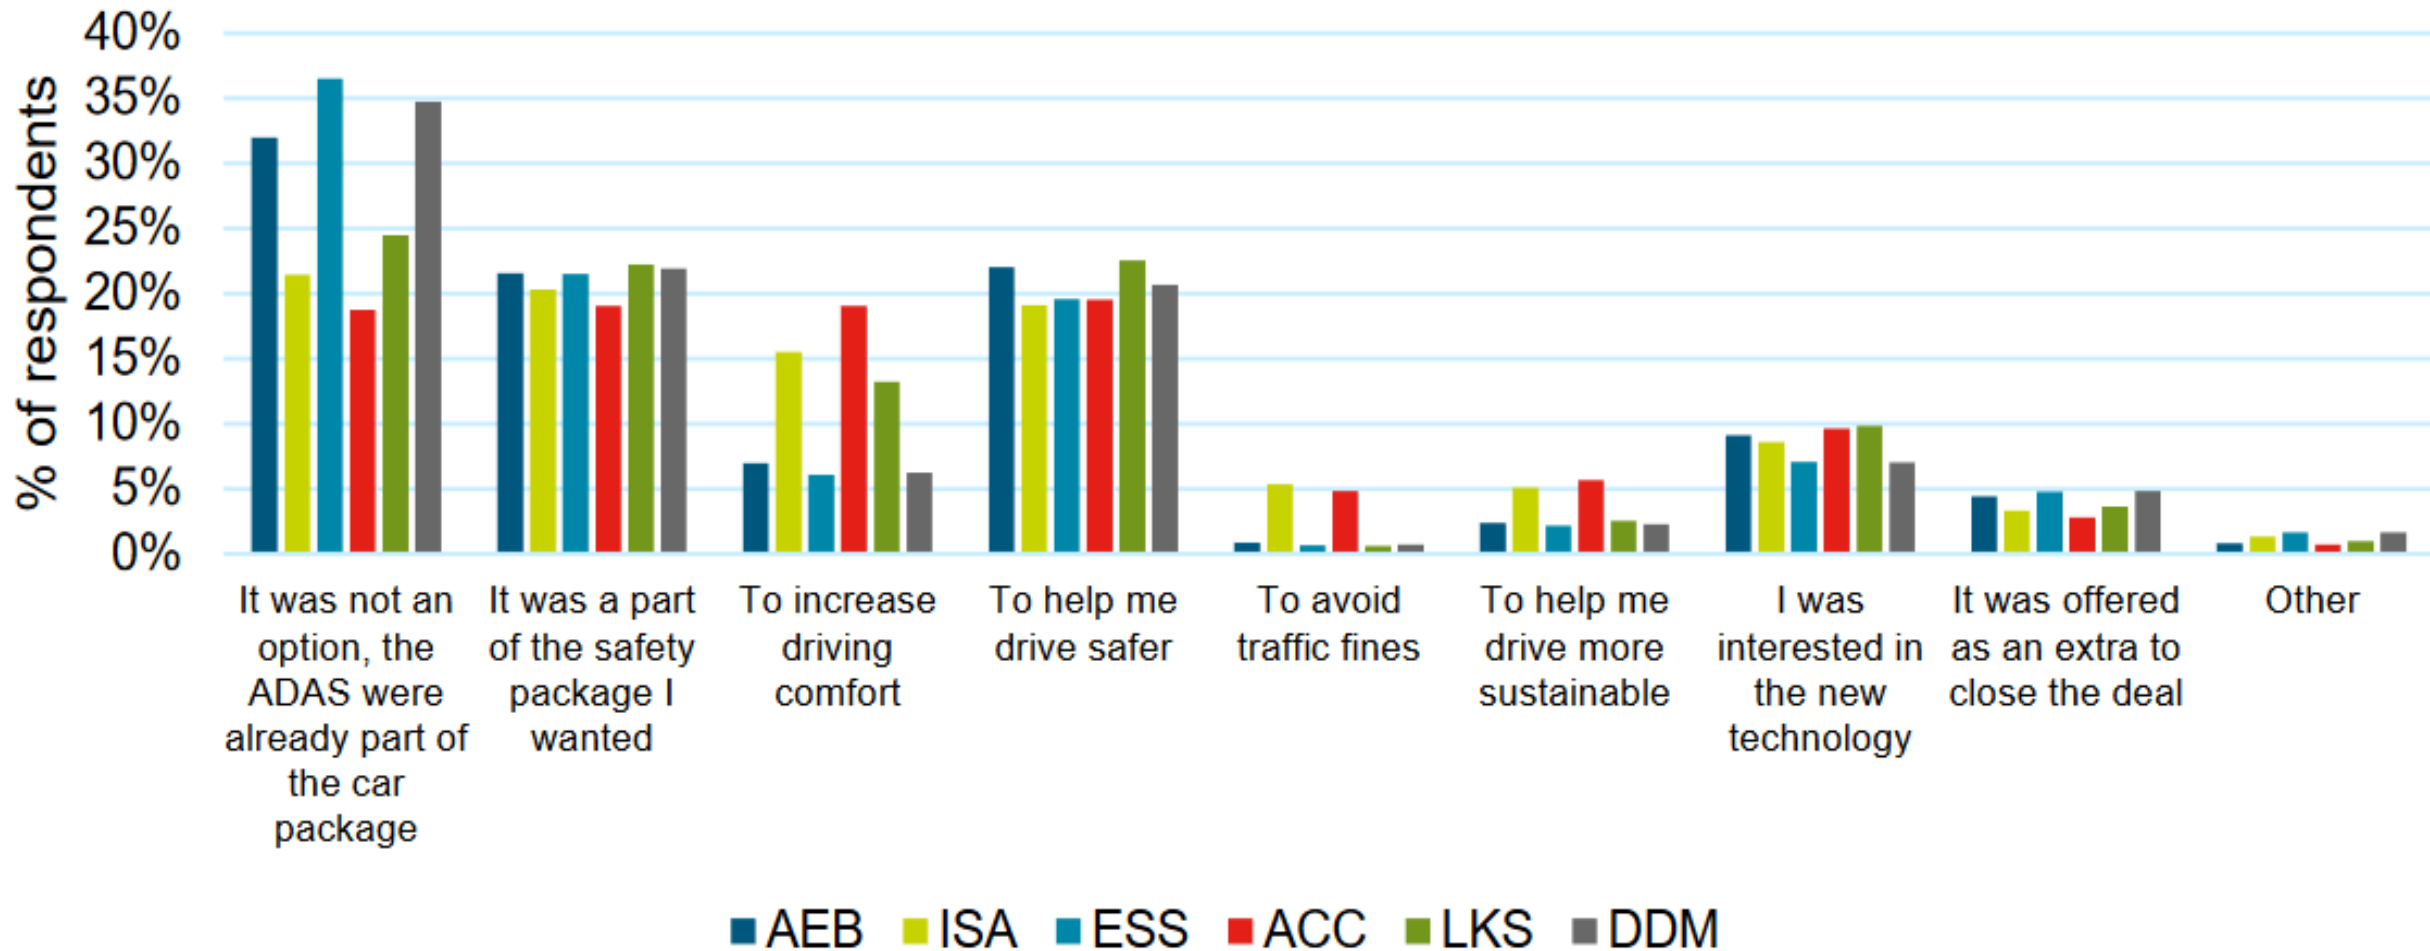

Lane Keeping System

Driver Monitoring for Drowsiness

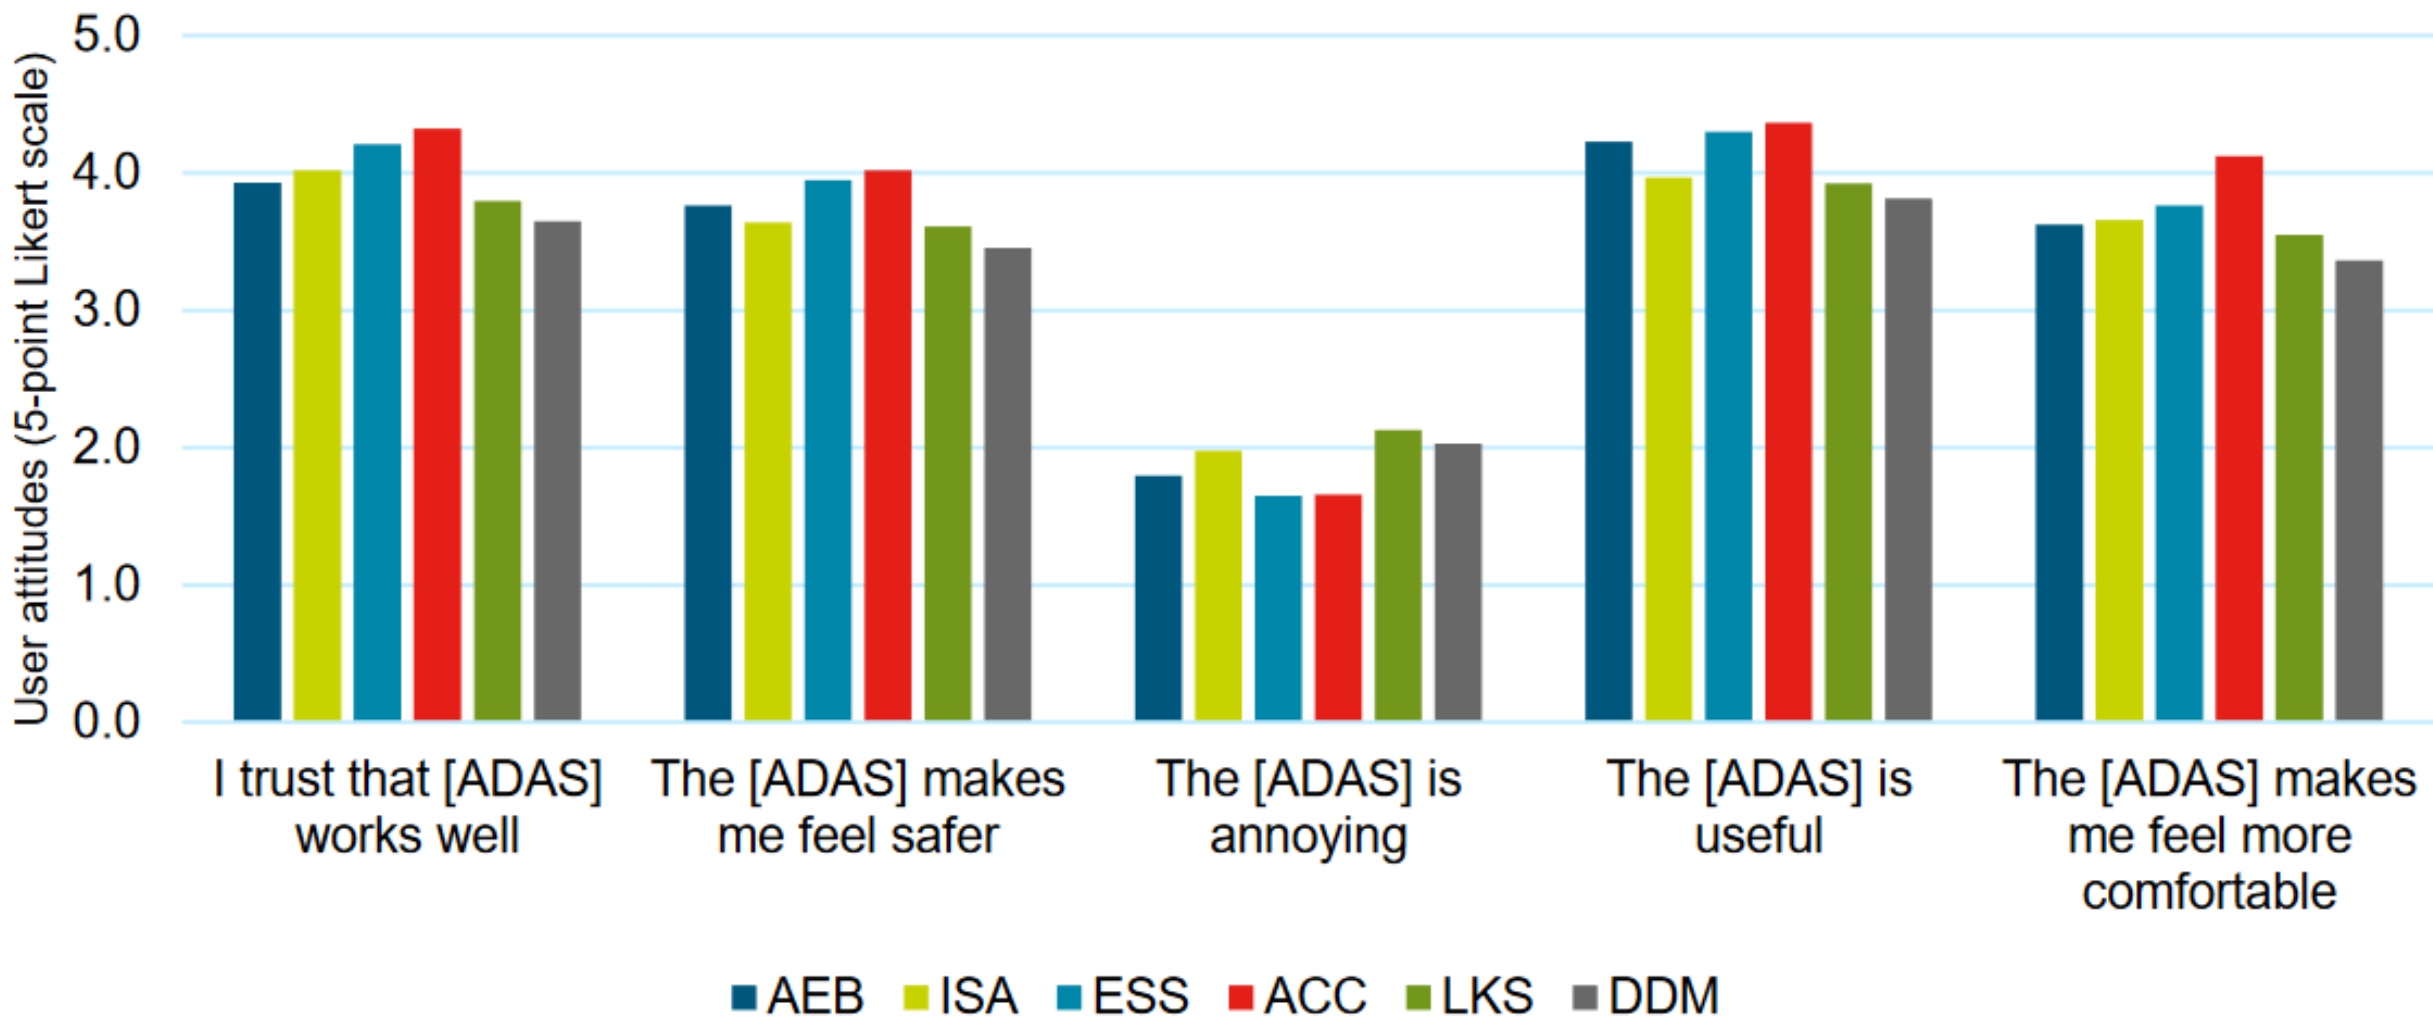

Reasons to include ADAS in the car during purchase

(Average of six EU countries, n=25757, multiple selections possible)

User attitudes per ADAS

(Averages of six EU survey countries)

Most users do not receive training, but rely on information from the car seller, the user manual or they apply the 'trial-and-error' method.

The quality of both information and instruction via these learning methods is found to be imperfect, which means that drivers are provided with incorrect and/or incomplete information.

CONCLUSIONS

Better information about ADAS (systems limitation and Operation Design Domain)

Improve accuracy of functioning

Improve fail safe communication

Follow pre requisites for HMI design (LKS, ISA, ACC ok)

Clear maintenance and calibration processes needed over the life time

Better instructions and training for drivers needed

Harmonised terminology?

REGION I

- Terminology influences the users' expectations of ADAS' functionality and operation.
- Name must not mislead the users, for example by suggesting that the vehicle's system will drive itself (e.g. "Autopilot", "ProPilot")
- Name must reflection the functionality
- Certain level of harmonization would increase awareness

Consumer expectations in ITS

ITS provides mobility users with dynamic information

Traffic regulations

Safety relevant data

Incidents & warnings

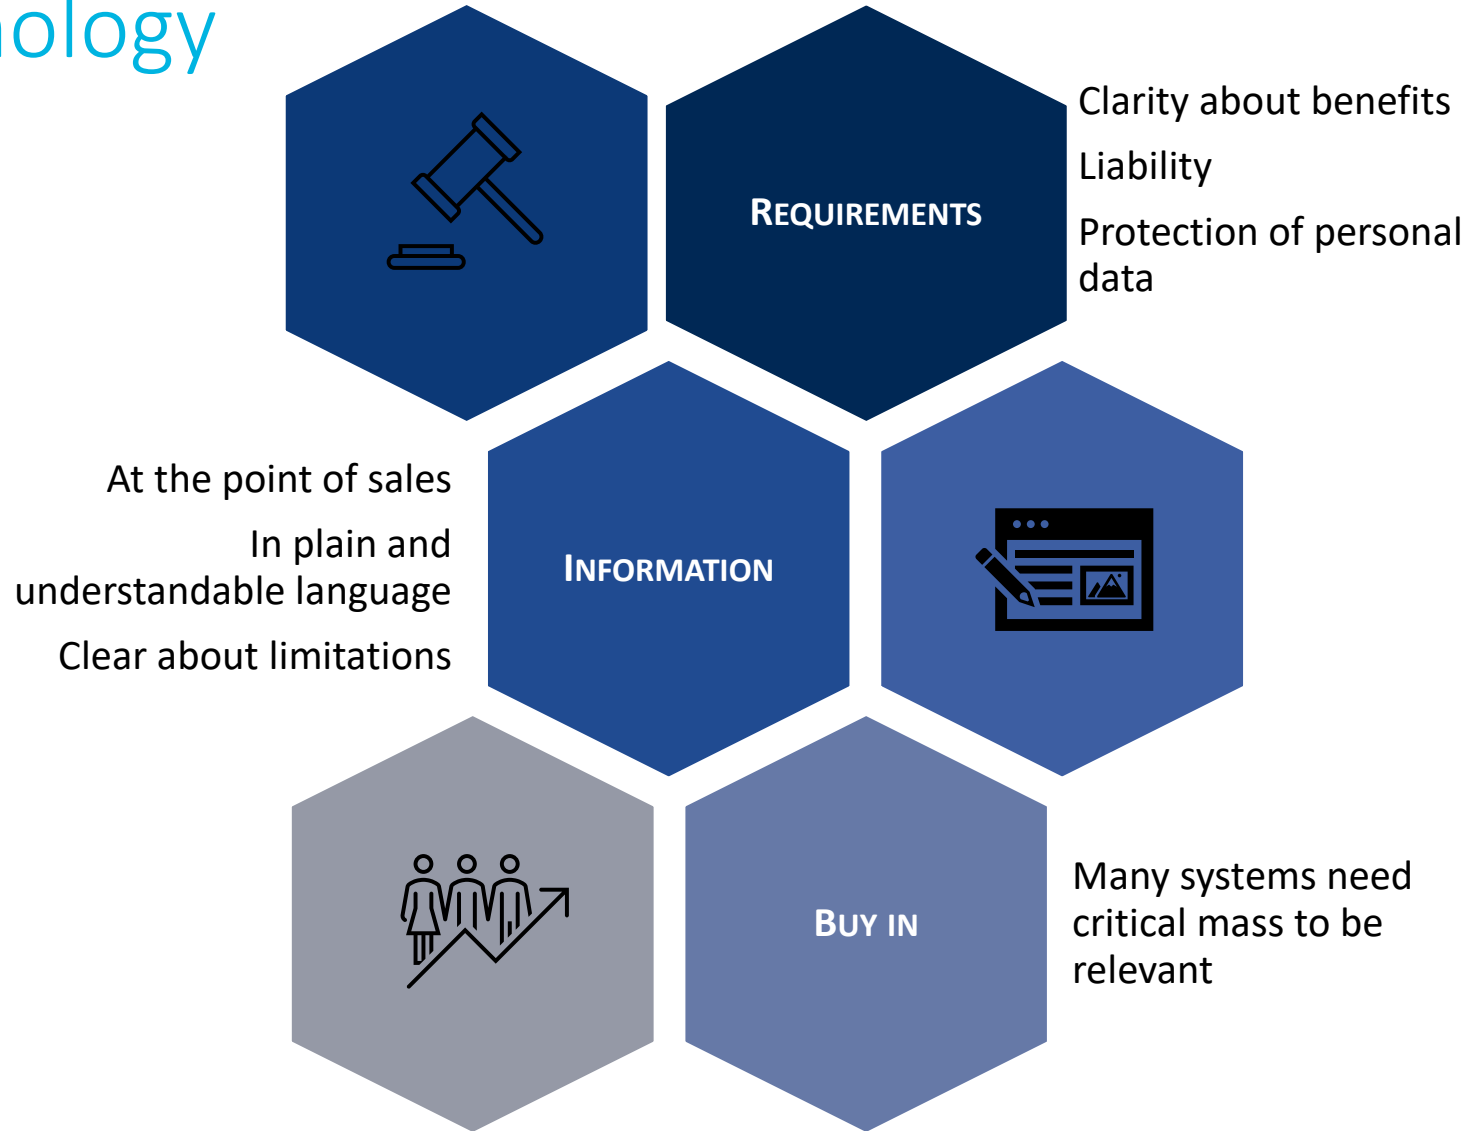

Transport and mobility

Understanding users needs to allow them to embrace the technology

Clarity about benefits

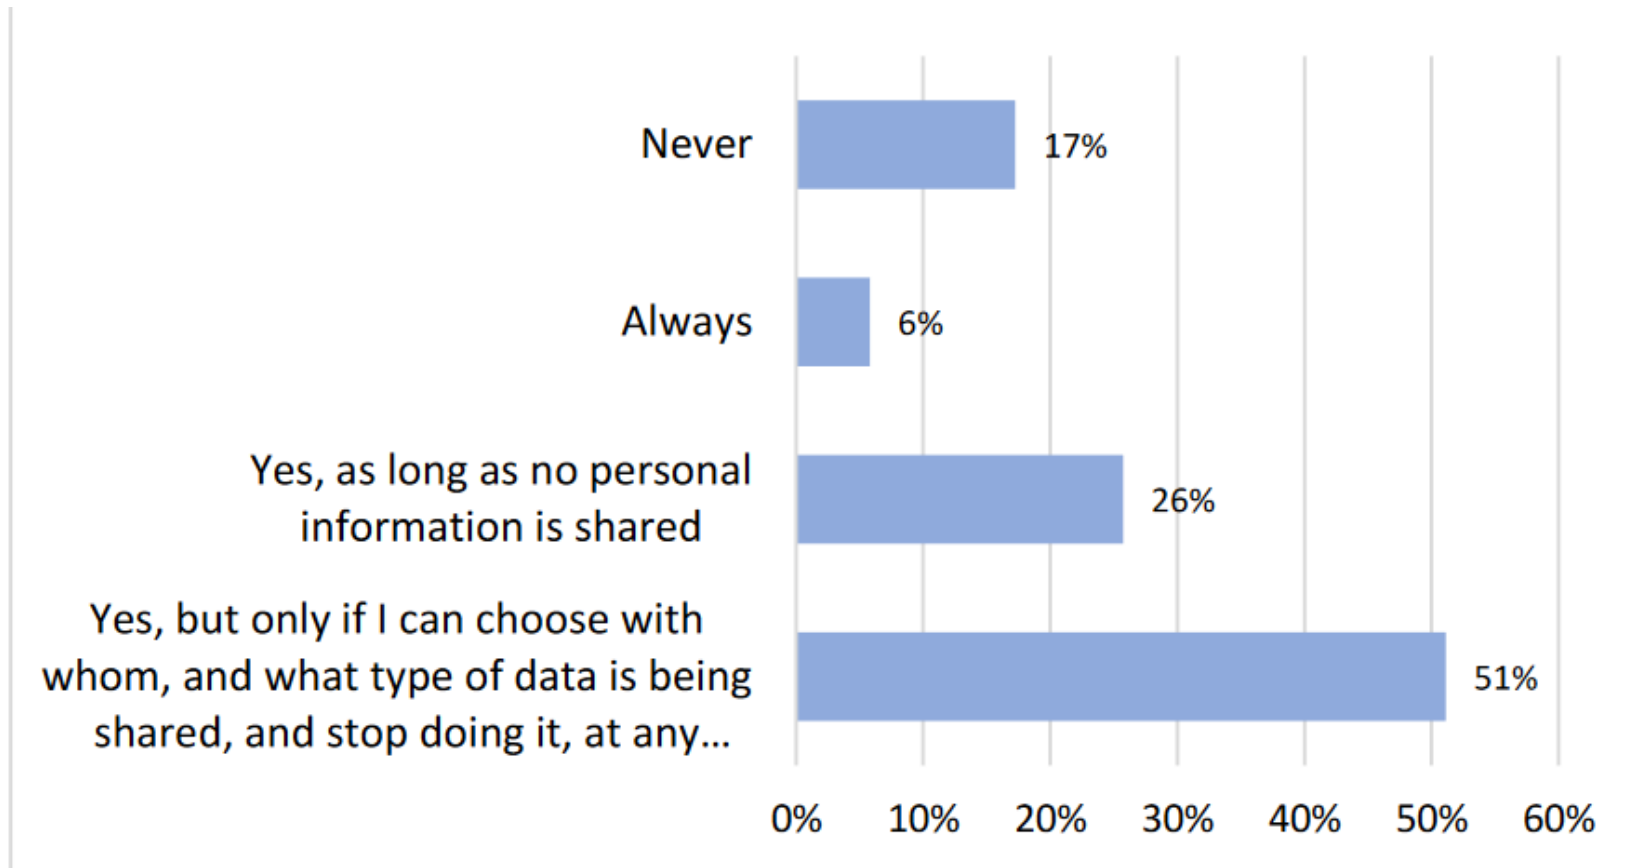

- Safer transport
- More affordable transport
- Time and efficiency gains

Optimising modes - MaaS

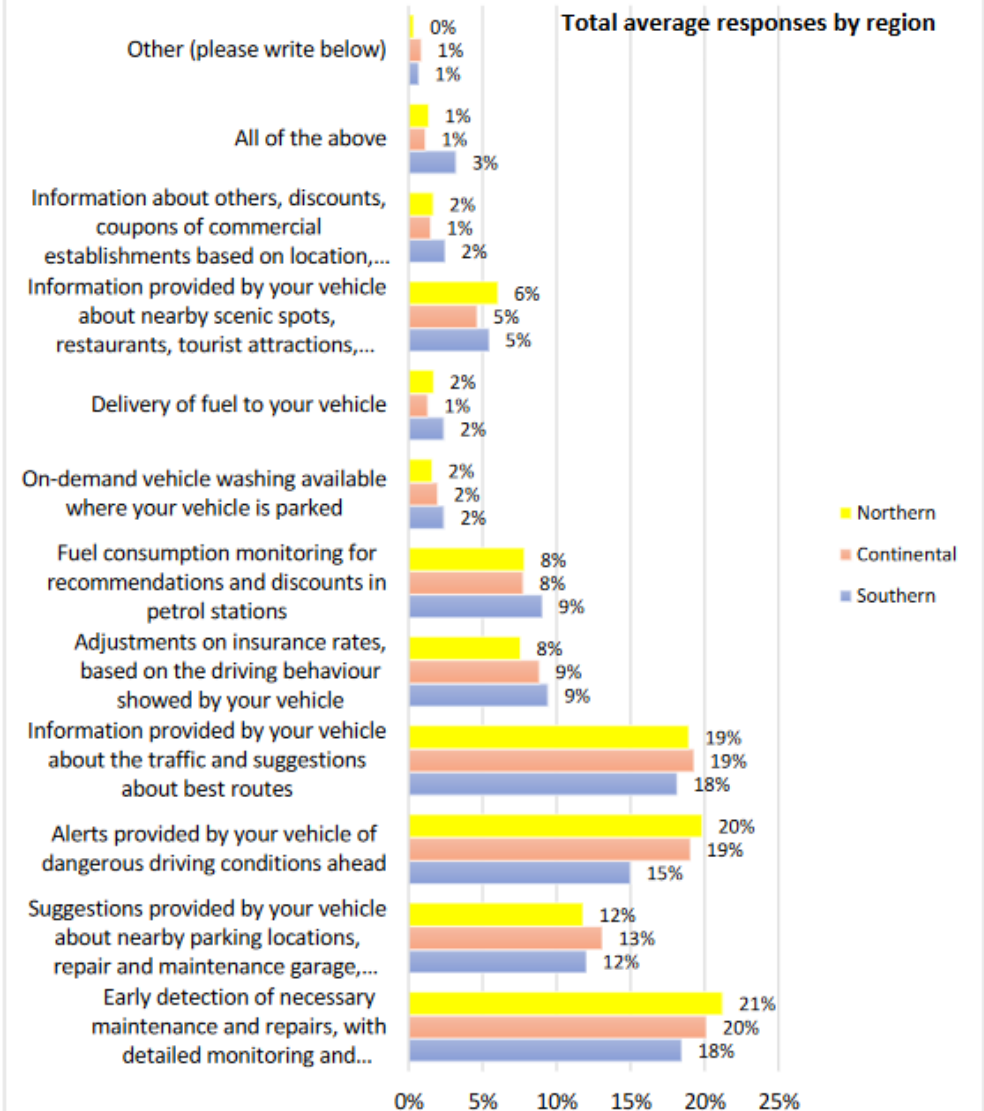

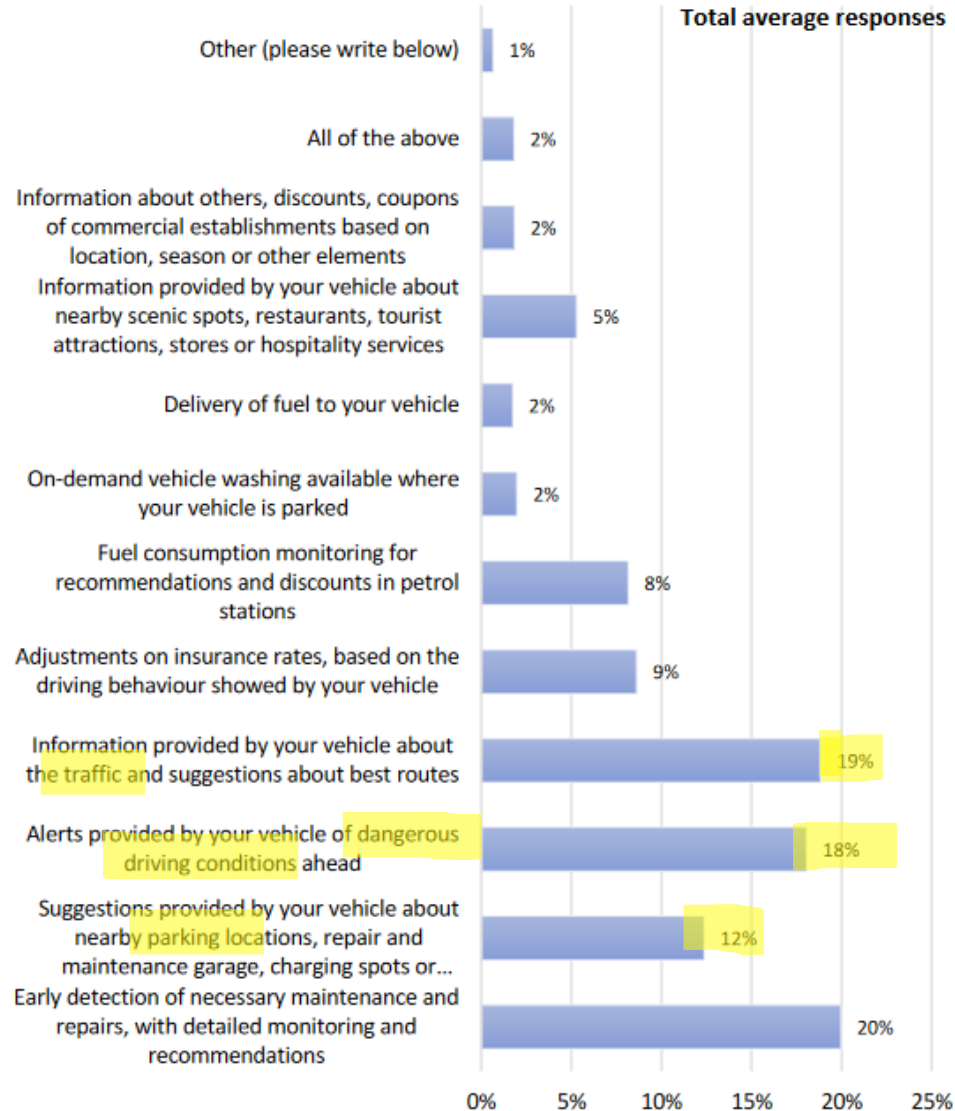

- Inter-modal complementary in mobility planning
- Improving air quality
- Reducing congestion

Data Protection

Would you be comfortable sharing information from your vehicles with various stakeholders (including public authorities) in exchange for services or functionalities that could benefit your driver experience or safety?

Would you be willing to share information collected from your vehicle to receive any of the following services?

Information

Clarity about the systems

- Misleading advertisement
- Hard to define a “moment” to inform users (example mystery shopping)
- From ownership to use, may create new challenges

Empower drivers/ users

- Opt-in/ opt out
- Adapt driver training, acquiring the skills first and then getting introduced to ADAS

Thank you for your attention!
