Document FRAV-29-07 Submitted by the DDT workstream leader 29<sup>th</sup> FRAV session, 15 June 2022

Informal Working Group on Functional Requirements for Automated Vehicles

### Activities Planning

14 June 2022

### FRAV current status

| Diversity of ADS and ODD | 142 safety proposals | > F | Five "Starting Points" | $\left. \right\rangle$ | List of "Safety Topics" |  |
|--------------------------|----------------------|-----|------------------------|------------------------|-------------------------|--|
| Safety topics review     | Tasks/Objectives     | >Cc | mmon Understanding     | $\rangle$              | Safety Needs            |  |
| General Requirements     | Specifications       |     | ADS descriptions       |                        | Package Delivery        |  |

#### Status-quo

- GRVA accepted a 2 year extension of FRAV mandate (June 2024)
  - First step to consolidate FRAV deliverables by June 2023
  - Second Step to integrate FRAV/VMAD work into a unicum
  - OICA/CLEPA proposed roadmap to drive AC.2 decision in June (GRVA-13-18)

## General overview of activities

SCOPE

**Nominal DDT** 

Safety-Critical

Slide 5

#### **Driving Analysis**

- It aims to address ORU/Objects safety by ensuring that ADS will respond appropriately to roadway objects
- Detectable properties to differentiate and classify ORU and relevant objects
- OEDR-based detection, recognition, and classification

| Objects   | Events/Interactions   |  |  |
|---|---|--|--|
| Vehicles (e.g., cars, light trucks, heavy trucks, buses, motorcycles) | Lead vehicle decelerating (frontal), lead vehicle stopped (frontal), lead vehicle accelerating (frontal), changing lanes (frontal/side), cutting in (adjacent), turning (frontal), encroaching opposing vehicle (frontal/side), encroaching adjacent vehicle (frontal/side), entering roadway (frontal/side), cutting out (frontal) |  |  |
| Pedestrians   | Crossing road – inside crosswalk (frontal),<br>crossing road – outside crosswalk (frontal),<br>walking on sidewalk/shoulder   |  |  |
| Pedalcyclists   | Riding in lane (frontal), riding in adjacent lane (frontal/side), riding in dedicated lane (frontal/side), riding on sidewalk/shoulder, crossing road – inside crosswalk (frontal/side), crossing road – outside crosswalk (frontal/side)   |  |  |

| Objects                                      | Events/Interactions   |  |  |
|--|---|--|--|
| Animals <sup>5</sup>                         | Static in lane (frontal), moving into/out of lane (frontal/side), static/moving in adjacent lane (frontal), static/moving on shoulder |  |  |
| Debris <sup>6</sup>                          | Static in lane (frontal)  |  |  |
| Other dynamic objects (e.g., shopping carts) | Static in lane (frontal/side), moving into/out of<br>lane (frontal/side)  |  |  |

| Objects                      | Stop, yield, speed limit, crosswalk, railroad crossing, school zone |  |
|------------------------------|---|--|
| Traffic signs <sup>7</sup>   |   |  |
| Traffic signals <sup>7</sup> | Intersection, railroad crossing, school zone                        |  |
| Vehicle signals              | Turn signals  |  |

Table 1 - Dynamic elements and their properties

#### OEDR Analysis: Behaviour Competency Identification

- ADS safety recommendations for interactions with subsets of ORU
- Behaviour competences that can be applied to the events characterizing the ODD to ensure compliance with the applicable regulatory and legal requirements

| Event   | Response  |  |  |
|---|---|--|--|
| Lead vehicle decelerating                       | Follow vehicle, decelerate, stop                      |  |  |
| Lead vehicle stopped                            | Decelerate, stop                                      |  |  |
| Lead vehicle accelerating                       | Accelerate, follow vehicle                            |  |  |
| Lead vehicle turning                            | Decelerate, stop                                      |  |  |
| Vehicle changing lanes                          | Yield, decelerate, follow vehicle                     |  |  |
| Vehicle cutting in                              | Yield, decelerate, stop, follow vehicle               |  |  |
| Vehicle entering roadway                        | Follow vehicle, decelerate, stop                      |  |  |
| Opposing vehicle encroaching                    | Decelerate, stop, shift within lane, shift outside of |  |  |
| Opposing vehicle encroaching                    | lane  |  |  |
| Adjacent vehicle encroaching                    | Yield, decelerate, stop                               |  |  |
| Lead vehicle cutting out                        | Accelerate, decelerate, stop                          |  |  |
| Pedestrian crossing road – inside crosswalk     | Yield, decelerate, stop                               |  |  |
| Pedestrian crossing road – outside of crosswalk | Yield, decelerate, stop                               |  |  |
| Pedalcyclist riding in lane                     | Yield, follow   |  |  |
| Pedalcyclist riding in dedicated lane           | Shift within lane <sup>9</sup>                        |  |  |
| Pedalcyclist crossing road – inside crosswalk   | Yield, decelerate, stop                               |  |  |
| Pedalcyclist crossing road – outside crosswalk  | Yield, decelerate, stop                               |  |  |
| Lead vehicle decelerating                       | Follow vehicle, decelerate, stop                      |  |  |
| Lead vehicle stopped                            | Decelerate, stop                                      |  |  |
| Lead vehicle accelerating                       | Accelerate, follow vehicle                            |  |  |

Table 2 - Behaviour competences for given events

#### Safety Models

- Propose multiple modeling methodologies. (safety envelopes, scenario-based, driver modeling, technology state-of-the-art, etc.)
- Compare ADS performance against benchmarks for expected behavior (e.g., ADS performance vs model performance)
- Address collision-avoidance/crash-mitigation boundaries

#### Verifiable Criteria

- Global requirements with verifiable criteria established via an ODD-based approach
- DDT performance requirements will not be prescriptive
- Approach allows for local constraints and parameters
- Performance acceptable if satisfies model expectation
- Example for Lane-Keeping in <u>FRAV-25-11</u>

## Summary

#### **Proposal**

- Need to streamline the process and improve efficiency
- Merge similar workstreams to focus on deliverables
  - Safety Models + ORU workstream + (SG1 Scenario Generation?)
  - All covered by the ODD-framework approach
- Other workstream working in parallel (User Role, EDR/DSSAD, ...)
- Ensure verifiable criteria deliverables by June 2023
- FRAV+VMAD editorial merging into a single document post June 2023

# Back-up

# Safety models for DDT

- Challenge of local variables and assumptions.
  - Local operating conditions cannot be harmonized: Traffic laws, signs, signals, markings, languages, driver education and behaviors, etc.
  - Safe driving depends upon adaptation to local conditions and assumptions.
- Verifiable metrics can be derived from the application of an ODDbased approach.
  - Allow application of local variables and assumptions
  - Propose multiple modeling methodologies. (safety envelopes, scenario-based, driver modeling, technology state-of-the-art, etc.)
  - Compare ADS performance against benchmarks for expected behavior (e.g., ADS performance vs model performance)
  - Address collision-avoidance/crash-mitigation boundaries.

# Safety models for DDT

- Global requirements with verifiable criteria established via an ODDbased approach.
  - DDT performance requirements will not be prescriptive.
  - Approach allows for local constraints and parameters.
  - Performance acceptable if satisfies model expectation.
- FRAV analyzing various models.
  - Aim to propose various models that result in safe driving actions.
  - May result in multiple models that may be used to demonstrate performance.
  - Models can address nominal driving and collision avoidance/mitigation.
- Expectation to furnish global specifications with annexes providing methods for establishing verifiable criteria.

## ORU properties-based approach

- Objects and other road users (ORU) have attributes detectable by an ADS.
  - These attributes enable differentiation.
- OEDR involves detection, recognition, and classification.
  - At the most basic level, an ADS must detect safety-relevant objects in and around the roadway.
  - Subsets of objects must be recognized to enable correct ADS evaluations and responses (e.g., car, truck, bus, motorcycle, cyclist, pedestrian, animal).
  - In some cases, subsets may need to be further classified (e.g., police car, fire truck, road worker).

# ORU properties-based approach

- The properties-based approach aims to address ORU safety by ensuring that ADS will respond appropriately to roadway objects.
  - Detect the attributes that enable differentiation.
  - Recognize and classify objects in accordance with differences in the safety needs and ADS responses.
- This approach relates to issues surrounding ADS communications or signaling in ORU interactions.
  - Some, but not all, ORU may need information from the ADS.
  - For example, law enforcement may need to know if an ADS is operating a vehicle. However, this information could adversely impact ORU behaviors (e.g., increase in higher-risk behaviors based on predictability of ADS responses).

# ORU properties-based approach

- ORU workstream building out OEDR-based framework.
  - Detectable properties to differentiate and classify ORU.
  - OEDR-based detection, recognition, and classification.
  - ADS safety recommendations for interactions with subsets of ORU.
- ORU workstream developing FRAV response to AC.2 mandate regarding external light-signaling.
  - Identify safety-relevant needs for external communication/signaling, if any.
  - Evaluate possible solutions to meeting needs.
  - Define nature of light-signaling solutions, if any.
  - Particular attention to communicating ADS operational status.
  - Deadline set for November 2022.
