

EC suggestion

Proposal for scope, testing, etc.

| | | | | | |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------|----------------------------------------|------------------------------------------------|----------------------------------------|-----------------------------------------------------|
| Scope | All M1 and N1 vehicles fitted with a crash detection sensor | | | | |
| Type of triggering | Automatic and manual | | | | |
| Testing triggering | If doing R94 only – test in R94 | If doing R95 only – test in R95 | If doing R94 and R95 – test in R94 and R95 | If doing e.g. R12 – test in R12 | If doing no full-scale test – provide documentation |
| Testing crash resistance | Test call after R94 and component test | Test call after R95 and component test | Test call after R94 and R95 and component test | Test call after R12 and component test | Only component test |
| Assessment after full-scale crash test | Demonstrate: Triggering occurred, test call can be established, subjective audio check, and successful MSD transmission | | | | None |
| Assessment after component test | Normal conformance testing (functional); suggested to do component test first | | | | |
