**GRSG informal group on Accident Emergency Call System (AECS)  
List of disagreements of AECS members on the issues of the draft Regulation**

Japan basic position:

AECS-03-04 includes specific national requirements for the wireless communication systems or network providers. Such specific national requirements are not suitable for the requirement under the 1958 Agreement. Therefore, those requirements should be handled by the each Contracting Party.

With regard to data transfer to the PSAP, its success depends on wireless data communication environment in the each Contracting Party. Since the countermeasure for improving the success rate of data transfer should be addressed by the each Contracting Party based on each country's situation, such requirements should not be included in UN Regulation.

**6. Requirements**

6.1	The effectiveness of AECD shall not be adversely affected by magnetic or electrical fields. This requirement shall be met by ensuring compliance with Regulation No. 10:	The effectiveness of AECD shall not be adversely affected by magnetic or electrical fields. This requirement shall be met by ensuring compliance with Regulation No. 10:	The effectiveness of AECD shall not be adversely affected by magnetic or electrical fields. This requirement shall be met by ensuring compliance with Regulation No. 10:

	with the appendix to annex 9 of Regulation No. 17. Details of the test procedure are given in annex 8.	demonstrated by compliance with the performance requirements of <b>Annex 8 REFERENCE / copy/paste of Annex 9 to R17</b>	<b>withstanding the test pulse described in annex 9 - appendix of Regulation No. 17.</b>	tests conditions is a possible reference.			
6.5	The AECD shall ensure reception and processing of standard precision navigation signals. This requirement is deemed to be met if the AECD has withstood all tests prescribed in annex 9.	The AECD shall be capable of proper reception and processing of standard precision global positioning signals. This shall be deemed to be fulfilled if the Global Navigation System Receiver is compliant with CEP95.	The AECD shall be capable of proper reception and processing of standard <b>precision GNSS signals. The AECD GNSS receiver shall comply with requirements 6.5.1 – 6.5.7</b>	CEP 95 defines the precision of positioning. GPS and GLONASS and Galileo standards and chipsets (soon for Galileo) are available and sufficient. Moreover the positioning can be made more accurate with map matching and additional devices in the vehicle.		Regarding the paragraphs 6.5 to 6.5.8, we can support OICA proposal AECS-02-02 if the proposal aimed for developing a quantification requirement.	
6.5.1			<b>The GNSS receiver shall receive and process the signals from at least two global satellite navigation systems.</b>	-			
6.5.2			<b>The GNSS receiver shall operate and provide navigation solution with accuracy of 15 m at confidence factor 0,95 in horizontal plane at speed up to 250 km/h.</b>	-

	nationally]						
6.6.3	The communications module shall provide batch transmission of data on the accident. The data exchange protocol shall establish mandatory priority flagging for emergency calls. The specifications for data exchange protocols are given in annex 10.	[The communications module shall provide batch transmission of data on the accident. The data exchange protocol shall establish mandatory priority flagging for emergency calls. The specifications for data exchange protocols are given in annex 10.]	When setting up an emergency call, the AECD shall set bits 6 and 7 of the service category element in accordance with ETSI TS 124 008.  The AECD shall enable the following mechanisms of data transmission:  - for EU: in-band data transmission in accordance with ETSI TS 126 267;  - for Russia: in-band data transmission in accordance with ETSI TS 126 267; SMS in accordance with mobile communication standards listed in section	(Comment) Overall this is one approach to integrate in the main regulation key regional

Table 4. Requirements for data exchange

Data and commands	Transmitting side	Receiving side	Data transmission mechanism	Notes
MSD	AECD	PSAP	In-band modem	Applicable for EU and Russia [Japan?]. MSD format is described in Annex 14
MSD	AECD	PSAP	SMS	Applicable for Russia [Japan?]. The AECD shall send MSD via SMS in case in-band MSD transmission failed. The AECD shall also send MSD via SMS upon reception of the corresponding command.
Command to re-send MSD via SMS	PSAP	AECD	SMS	Applicable for Russia [Japan?]. The specifications for data exchange protocols are given in Annex 10.
Command to place an emergency call	PSAP	AECD	SMS	
Command to deregister from the network serving emergency calls	PSAP	AECD	SMS	
MSD containing AECD testing results	AECD	PSAP	In-band modem	Applicable for Russia [Japan?]. MSD format is described in Annex 14

6.6.4	The communications module shall provide a full duplex voice connection in speakerphone mode, with an emergency services operator, the transmission of message about the vehicle by means of in-band modem, functioning in mobile wireless communication standards GSM 900 and GSM 1800, UMTS 900 and UMTS 2000.	When fitted, the communications module shall provide full duplex voice connection in speakerphone mode compatible with the PSAP identified in Annex XXX2.	The AECD shall provide full duplex hands-free voice connection with the PSAP using the mobile communication standards listed in section 6.6.	Approved OICA proposal

6.6.5	<p>If it is not possible to transmit information using the voice modem for 20 seconds after the start of data transmission, the AECD stops using the voice modem and transmits the information by means of text messages (SMS). There shall be provision for the information to be transmitted a second time using the voice modem, working through the established voice connection, and by means of SMS. If it is not possible to transmit information using mobile telephone networks, the information not transmitted shall be stored in an energy-independent memory and transmitted when possible.</p>	<p>When fitted with full duplex voice connection capability, the AECD shall stop data transmission via in-band modem not later than [20] seconds after having started the demand, if no duplex voice communication can be established.</p>	<p>The AECD shall stop data transmission via in-band modem not later than [20] seconds after having started the demand, if in-band MSD transmission failed, and enable voice connection with PSAP. For Russia, in addition, the AECD shall immediately send MSD via SMS if in-band MSD transmission failed.</p> <p>If the connection was interrupted before the AECD has successfully completed MSD transmission, while 20 sec since the demand have not elapsed, the AECD shall re-establish the call and initiate MSD retransmission by in-band modem.</p> <p>If the connection was interrupted after the AECD has successfully completed MSD transmission, or after the 20 sec since the demand have elapsed, the AECD shall re-establish the telephone connection but shall not initiate the retransmission of MSD by in-band modem.</p>	<p>Approved RUS proposal</p>

			In case it was not possible to establish voice connection and/or send MSD using mobile communication networks listed in section 6.6, the AECD shall store the MSD in non-volatile memory and attempt re-transmission when network service is available.				

6.6.6 After the emergency call is completed, the following shall be ensured:

6.6.6.1	Reception of command in SMS format concerning the repeat emergency call, and the issue of the repeat emergency call within a configurable period of time;		Processing of commands described in Table 4 (if applicable).				
---------	---	--	--	--	--	--	--

6.6.6.2 Automatic reception of incoming phone calls for a period of not less than 20 minutes after the emergency call.]

6.7	The AECD shall offer the possibility of checking its functionality in automatic and manual modes, and show information on any faults on an optical device status indicator	The AECD shall provide the driver with a failure warning when there is a failure in the AECD that prevents the requirements of this Regulation of being met. The warning shall be as specified in	The AECD shall provide the driver with a failure warning when there is a failure in the AECD that prevents the requirements of this Regulation of being met. The warning shall be as specified in paragraph XXX below.
