Proposal to amend the draft FRAV interim submission to GRVA/WP.29

Modifications to the existing text are marked in **bold** for new or ~~strikethrough~~ for deleted characters.

1.8.   ADS features

1.8.1.   An ADS feature refers to an application of ADS capabilities designed for use within a defined ODD. In the case of an ADS designed to operate within a single ODD, the ADS and the ADS feature are synonymous. **Examples of ADS features are highway-only driving and automated parking.**

1.8.2   Although an ADS performs the entire DDT on a sustained basis, an ADS **with separate ADS features** may be designed to operate within more than one ODD.

1.8.3~~2~~.   Each set of ODD-specific capabilities has a unique set of constraints defining the conditions under which the ADS may be used.

~~1.8.3.   An ADS feature refers to an application of ADS capabilities designed for use within a defined ODD. In the case of an ADS designed to operate within a single ODD, the ADS and the ADS feature are synonymous.~~

Justification

Proposal to move the explanation of "ADS feature" to the start of the section, introduce an illustration to aid reader understanding, and clarify that only an ADS with more than one feature would be designed to operate in more than one ODD.
