

Reservation concerning the draft FRAV interim submission to GRVA/WP.29

Compendium of ODD Conditions

1. *Rain* means water droplets of 0.5 mm or greater.
2. *Rainfall rate* means the intensity of rain falling per hour assuming constant intensity during this period. The rainfall rate shall be specified in cm/hour.

Comments

Why the need to define such detailed elements?

There are diverse solutions to enable the ADS to recognize the relevant ODD boundary, such as using the signals from the automatic windscreen wiper or using the certain algorithm of camera, so the ADS does not need to know what is the rainfall rate and so on.
