

Proposed introductory text to user section

1. This Human Factors section specifies recommendations for vehicle interactions with users in the vehicle who may have to deal with varying responsibilities for management of the DDT.
2. Other user roles are not yet specifically addressed. However, certain recommendations could be used for other user roles in a direct or comparable way.
3. The interaction and commonality that is required for remote operation of a fleet will need (much) more attention. Proposals from industry side are very welcome.
