

EC proposal to amend document EPPR-06-14e

B.2. TEXT OF THE REGULATION, FUNCTIONAL ON-BOARD DIAGNOSTICS (OBD)

Delete point 4 of section B.2.

Adapt numbering of subsequent points

45. Propulsion family definition with regard to OBD and in particular to test type VIII
A representative parent vehicle shall be selected to test [and demonstrate to the [certification] / [approval] authority] the test type VIII requirements based on the propulsion family definition laid down in Annex B.3.1

56. Documentation
The vehicle manufacturer shall fill out the information document in accordance with the template laid down in section B.4. [and submit it to the [certification] / [approval] authority].

Justification: EC compromise proposal EPPR-07-14e was partly accepted and partly rejected by the L-EPPR OBD expert group in the meeting on 03 Jun 14. In particular the torque limitation threshold as part of OBD Stage UN I was rejected. However, the EC considers this threshold as essential and therefore proposes to delete point 4 of section B2 entirely in document EPPR-06-14e so as to allow each Contracting Party to define its own performance criteria for MI activation in domestic legislation.
