

Problem:  
visibility of the D.I.  
when the STOP is "ON"  
(see video presented by Germany)

SLR-69-13

Solution : Minimum 50% of the D.I. apparent surface at more than 25 mm from the STOP

- Proposal:

## UNECE R48

Add in the paragraph 6.5.9.

6.5.9. Other requirements

.....

A minimum of 50% of the apparent surface of the rear direction-indicator lamps (category 2a or 2b) shall be at mote than 25mm from the stop lamp.

Justification: Existing solution without problem for the D.I. visibility when the STOP is "ON" should not be cancelled (minimum 50% of the D.I. apparent surface at more than 25 mm from the STOP )

Standard rear lamp on the market
