

Draft proposal for Infrastructure rev2

Infrastructure and capital goods:

This section provides rules for infrastructure and capital goods, such as the building in which the product or upstream materials or components are produced, machinery used in the manufacturing of the product or its materials or components, vehicles used for transportation in the product system. The applicable infrastructure and capital goods are limited to those that are not consumed and retained their function for a certain period.

In general, the production and end-of-life processes of infrastructure and capital goods used in the product system shall be excluded in the system boundaries. In case a practitioner would include the processes for the purpose, the practitioner shall claim to include the processes with some degrees of evidence and shall make a consensus with authorities.

However, it may possible to include the processes without any consensuses in the following case:

- Infrastructure/capital goods may be included if a dataset used for A-LCA already includes infrastructure/capital goods, and it is not possible, within reasonable effort, to subtract the data on infrastructure/capital goods from this dataset.
