OPI – User Interaction

Summary of Change (25 words or less)

Definition of ‘availability fallback user’

Reason for Change (Justification)

At the moment we have the following requirements

- (a) Continuously assess whether the fallback user is available to assume the role of driver at the end of the deactivation procedure.
- (b) Provide effective procedures for re-engaging the fallback user who has been detected not to be available.

But no indication what is meant with available.

Location

Under definitions section

Original text

A fallback user is available when the user is awake and correctly seated to enable the user to take control of the DDT.

Revised text
