

SLR-72-15

GTB has created a task force „Apparent Surface“ to support SLR work on the topic of simplification and clarification of the Apparent Surface / Single Lamp definition

A first meeting took place March 25th, 2025

The experts agreed to work on a method to determine the apparent surface that

- is simple and can be used by a CAD engineer
- can be used at an early design stage and leads to an unchanged result until the approval of the installation of the lamps
- is predictable and repeatable
- leads to more clarity and does not add complexity

A first input is planned for SLR 73 in July 2025
