Simplification of Lighting and Light-Signalling Regulations

The GTB understanding of the application of the Unique Identifier (UI) and the UN secure internet database in accordance with Schedule 5 of the 1958 Agreement
Existing Regulations
9 Groups of devices with various levels of amendment indicated in the approval markings

ONE new Regulation
Signalling Devices with various levels of amendment indicated in the electronic database

This simplified regulation contains:

- all provisions and operate according to the existing structure of series of amendments, their transitional provisions and supplements.
- transitional provisions associated with a new series of amendments of the regulations identified for each class of the device as applicable.

9 Groups of devices with various levels of amendment within one simplified regulation

Existing approval marking system not feasible because each time the regulation is amended the markings on all devices shall be updated

Some general markings relating to particular characteristics of the device will be retained
The Basic Approach to the Simplified Regulations

- The simplified regulation will contain all provisions and operate according to the existing structure of series of amendments, their transitional provisions and supplements.

- The transitional provisions associated with a new series of amendments of the regulations will be identified for each class of the device as applicable.

- It is expected that all contracting parties to the 1958 agreement will adopt this regulation but they still have the freedom to choose to adopt, or not to adopt, particular devices. These decisions will be recorded in ECE/TRANS/WP.29/343 that lists the status of the annexed Regulations and of the amendments).

- There is no requirement for the devices to carry the traditional type approval markings. These markings will be replaced by the UN secure internet database in accordance with Schedule 5 of the 1958 Agreement where all type approval documentation is held.

- This approach is necessary because the principle of grouping a number of devices into a single regulation is incompatible with the use of detailed approval markings on the devices.

- The use of the “Unique Identifier” giving access to the UN secure internet database will provide all information necessary to check conformity of the individual devices with their actual type approval documentation.
3.3 MARKINGS

3.3.1 Every device belonging to an approved type shall comprise a space of sufficient size for the Unique Identifier (UI) mark as referred to in Schedule 5 of the 1958 Agreement.

3.3.2 This mark shall be clearly legible and indelible and shall follow the format in the example shown below:

```
\[
\begin{array}{c}
\text{UI} \\
2a/3 \quad a/2 \\
a \geq 8 \text{ mm} \\
\end{array}
\]
```

The above Unique Identifier marked on the device shows that the type concerned has been approved and that the relevant information on that type approval can be accessed on the UN secure internet database by using 2706501 as the Unique Identifier.
Text of Revision 3 of the 1958 Agreement - Schedule 5
Circulation of approval documentation

1. Where an approval authority is required to or is requested to provide a copy of an approval and its attachments, it shall send the documents as paper copies, or by e-mail in electronic format, or by utilizing the secure internet database established by the United Nations Economic Commission for Europe.

   GTB understands: The UN secure internet database will be in operation by January 2019 and in time for the entry into force of the simplified Regulations

   IWG-DETA: it can not be guaranteed when the internet database will be in operation nor if it will be in time for the entry into force of the simplified Regulations.

2. Documents stored on the UN secure internet database shall consist of at least the documents specified in each UN Regulation. These shall include documentation communicating to Contracting Parties notice of approval, of extension, of refusal or withdrawal of approval or where production is definitely discontinued of a type of wheeled vehicles, equipment or parts pursuant to the UN Regulation.

   GTB understands: All the documents specified in the new simplified regulations will be stored in the UN secure internet database. These will be the “usual” documents that are currently required in the existing regulations.

   IWG-DETA: There is no obligation to store documents on the internet database unless the UN Regulation stipulates otherwise. If the documents are stored it must be the ‘usual’ documents.
Text of Revision 3 of the 1958 Agreement - Schedule 5
Circulation of approval documentation

3. If the type approvals applicable to a wheeled vehicles, equipment or parts are stored on the secure internet database, then the approval markings required by UN Regulations may be replaced by a Unique Identifier (UI) preceded by the symbol UI, unless specified otherwise in the UN Regulations. Such unique identifier shall be generated by the database automatically.

GTB understands:

a) GRE can decide that the Unique Identifier shall be used in place of the normal approval markings

IWG-DETA and SG-58: the UI may be used as an alternative and there is no obligation to use the UI. During next SG-58 session (10/03/17) it will be confirmed whether it is allowed for a UN Regulation to obligate the UI marking.

b) The Unique Identifier will give access to the "usual" documents and it will only change for the same reasons that a new approval marking would be required, i.e. an extension to an approval would not trigger a change to the Unique Identifier.

IWG-DETA: access: yes, to the 'usual' documents (depending on the access rights); change: depends, see Annex 1 to the draft guidelines (SG58-22-XX revised).

4. All Contracting Parties applying a UN Regulation shall have access to the information for that UN Regulation contained in the database by using the Unique Identifier and this will provide access to the relevant information relating to the specific approval(s).

GTB understands:

Access rights will be defined for certain other users of the UN secure internet database in addition to the Contracting Parties.

IWG-DETA: the access rights are under discussion. It is considered to give (limited) access also to 'other users'. E.g. information on the approval numbers as part of a UI may be made public. (No final decisions are made yet).
Text of Revision 3 of the 1958 Agreement - Schedule 5
Circulation of approval documentation

5. UN Regulations annexed to the 1958 Agreement may require the circulation of type approvals by electronic copies utilizing the secure internet database, where necessary for the efficient operation of the approval process, **subject to the access rights as defined by the Contracting Parties**.

*GTB understands:* As the secure internet database will be necessary for the efficient operation of the Simplified Regulations GRE can decide that the Unique Identifier shall be used in place of the normal approval markings.

IWG-DETA and SG-58: see 3a.

It is necessary to verify the GTB understanding of the operation of Schedule 5 in the context of the Regulations for which GRE is responsible.
