

BIORID CERTIFICATION TEST UPDATE

7/17/2015

GTR7 IG meeting

Agenda

2

- Existing Certification Tests
- Gen-X development
- Material replacement

Existing Certification Tests

- Tests
 - Spine quasi-static setup
 - ▶ Set springs and thorax/lumbar shape adjustment
 - Jacket only impact
 - ▶ Control jacket stiffness
 - Pelvis only impact, bottom
 - ▶ Control pelvis stiffness
 - Dummy without head restraint
 - ▶ Set damper, verify correct spring & shape adjustments

Existing Certification Tests

4

Jacket Only Impact

Existing Certification Tests

5

Pelvis Impact – bottom

Existing Certification Tests

6

Dummy certification without head restraint

Existing Certification Tests

7

- Status
 - All have corridors
 - New dummies tested to all corridors
 - ▶ Optional for dummy re-certifications
 - All in Mutual Resolution Draft
 - ▶ Bernie is crafting regulatory language

Gen-X Test Development

8

- History
 - Prior mini-sled with head restraint was not sensitive enough to dummy differences
 - Hypotheses
 - ▶ Need stiffer head restraint pad
 - ▶ Need spine straightening
 - ▶ Full back support with sliding
 - Developed new test equipment and procedures to be very sensitive to dummy differences

Gen-X

- Multi-segment full back support
- Base of spine can translate X and rotate Y
- Double teflon between dummy & sled to reduce friction
- Fairly stiff head restraint surface
- Same pendulum and energy transfer device

Gen-X

Gen-X

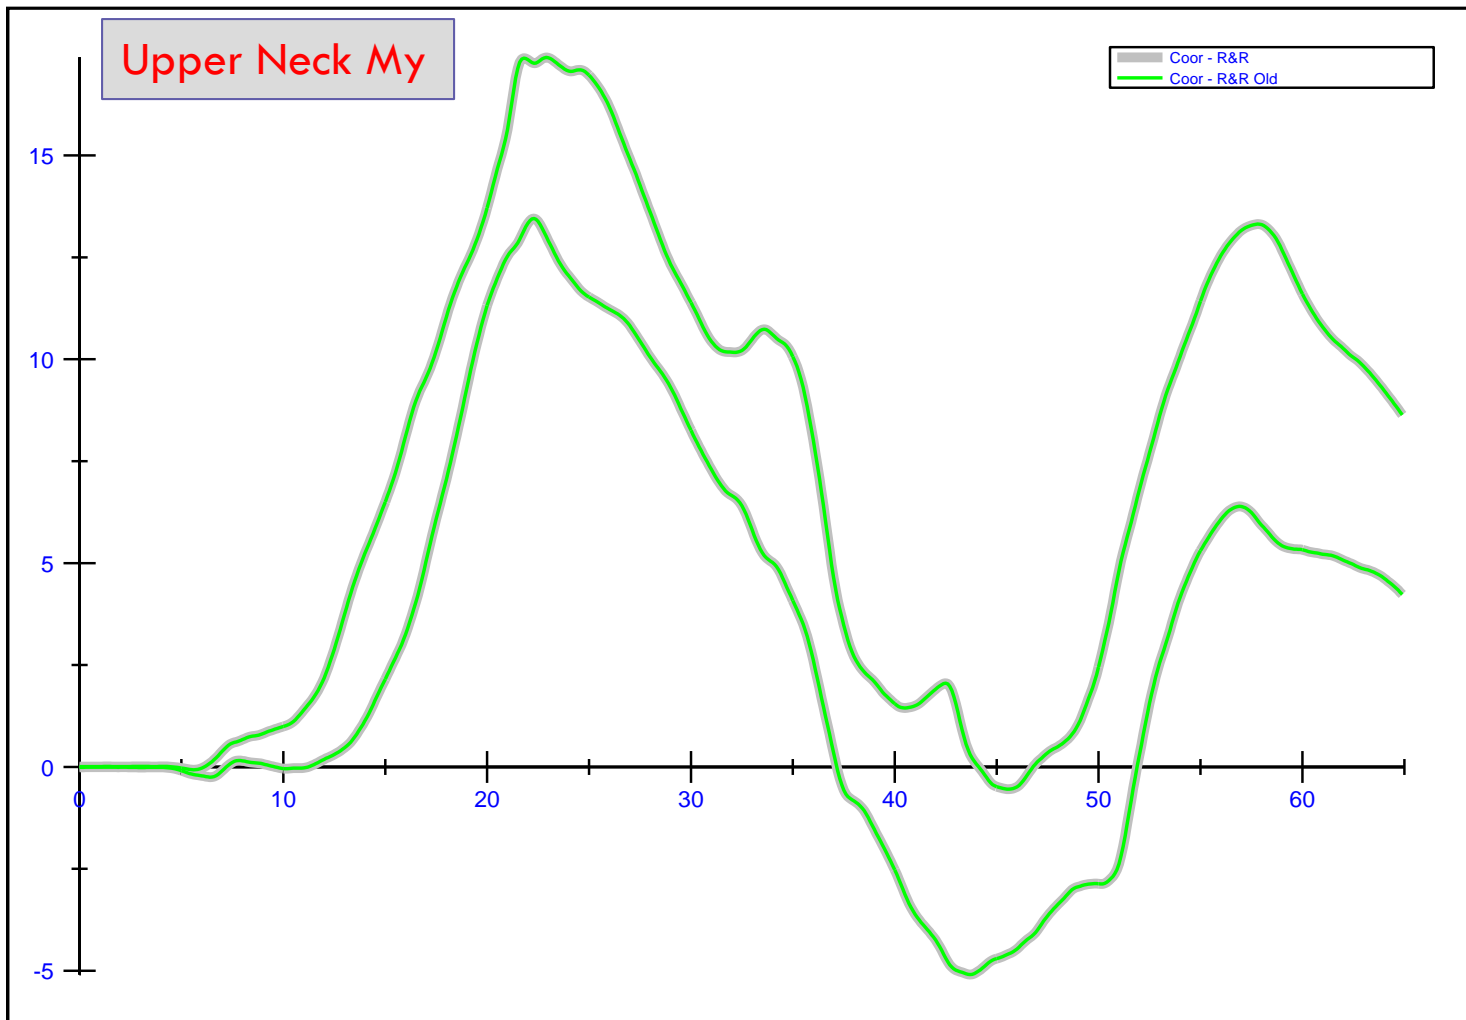

- Development progression
 - Developed equipment, procedures
 - ▶ Adjusted to be very sensitive to dummy differences
 - Initial trials with bumper stiffness, jackets
 - ▶ Could detect differences
 - Baselined 3 of 4 dummies from BAST R&R series as target to develop target range for all channels available
 - ▶ These dummies were determined to have acceptable R&R in a lab seat sled series (Dec. 2012 meeting)
 - ▶ Next slide gives an example

Gen-X Example R&R corridor

13

- Average time histories +/- 2 standard deviations
- Provides target for dummies

Gen-X Development

14

- VRTC had 2 dummies for injury criteria development
 - 0073 & DI8599
 - Appeared to perform differently in seats
 - Brought back to investigate with Gen-X
- Extensive testing done on Gen-X
 - Jacket, torsion pin, spine segment
 - ▶ Differences could be detected, but no single cause found

Gen-X Development

15

- Spine refurbished
 - New bumpers
 - ▶ to match compression targets from R&R dummies
 - Complete inspection
 - Verified spine setups
- Further Gen-X still showed differences
 - Dummy 0100 also tested in mix to see how it matched refurbished dummies

Gen-X Development

16

- Additional changes found during testing
 - Repair wear in 0073 damper
 - Repaired dummy 0100 Lower Neck (T1) load cell
 - ▶ Internal short to ground causing noise, erratic signal
 - Correct error in Lower Neck (T1) load cell data collection in Humanetics lab
 - ▶ Error in setup for DAS bridge completion selection caused bad data, varied with load cell
 - ▶ *NOT a load cell problem, strictly a measurement error!*

Gen-X Development

17

- Returned all 3 dummies to VRTC
 - Did small series multiple seats
- Their testing was inconclusive for R&R or injury criteria
 - Next, larger test series planned
- Brought dummies back for interim full certification and Gen-X test series
 - Testing on 0100 was different from other dummies or original testing
 - ▶ Found loose bolt at lumber load cell (allowed rocking)
 - ▶ Cable ties holding instrumentation bundle too tight
 - › Redoing with looser attachment changed performance!

Gen-X

18

- Sent dummies back to VRTC
- VRTC did their seat test series
- Brought dummies back to Humanetics for post certification & Gen-X
 - Gen-X complete
 - Certification tests still to be done

Pre Series Testing

All 3 dummies overlaid before first VRTC test series shows how they compare to each other and BAST R&R dummies

Gen-X, VRTC Series: All Pre

20

Gen-X Development – Next?

48

- Status of VRTC dummies
 - Dummies have reasonable fit to target R&R dummy corridors (pre & post)
 - Dummies good R&R most channels pre & post
 - Something changed on all dummies between mid & post
 - Testing or dummy change? Probably testing as all changed in same way, similar amplitude
- Wait to see results of VRTC sled series
 - This test might be much more sensitive than seat test

Gen-X Next Steps

49

- Repeat Post Test Gen-X to determine what changed in testing
 - Also do certification tests
- If VRTC testing looks good
 - Use all data collected and problems investigated to determine what channels to use and try to create a troubleshooting guide
 - Use R&R dummies & these 3 VRTC series dummies to establish Gen-X corridors
 - ▶ Heavily focused on 3 VRTC series dummies used to establish injury criteria
 - Finalize Mutual Resolution procedure, with draft corridors
 - Get equipment out for other regions and companies to try
 - Collect data on many dummies to improve corridors & troubleshooting guide

Material Replacement

50

- All bumper materials are obsolete
- New molds built to better control geometry
- Compression targets established for all bumpers
- Some of the bumpers have replacements matching targets
- Remainder are in works
- Materials look very good
