# FEEDBACK FOR WORKSHOP HELD AT BRITAX WITH END-USERS

Philippe LESIRE (LAB)

David BRAUN (Britax)

#### **ORGANISATION**

- 12 CRS (including user manuals)
- 3 cars (Audi A3, BMW 320 GT, Peugeot 308 SW)
- 9 installers (no instruction given)
- 6 inspectors (from Britax's team)
- Digital cameras
- Data collection forms

# INSPECTION OF INSTALLATION (Do not ark him/her, thir would influence hir/her next installation)

		YES	NO
Did the installer have used the user manual?			
If yes,	in the beginning?		
	during the installation process?		
Did he looked at	pictograms on the CRS?		
la your opinion, s	ras she/he comfortable during the

COMMENTS

ISUFIX knowledae:

#### ORGANISATION

- 12 rounds of CRS installation (10' each)
  - 108 installations
  - 108 check of installations
  - Pictures of misuse
- Debriefing with installers (and inspectors)
  - Top 3 CRS (best and worst)
  - What to improve
  - What was nice
- Debriefing with inspectors
  - Reactions/ behavior of installers
  - Feedback on issues encountered

# **OVERVIEW**

#### PRELIMINARY RESULTS

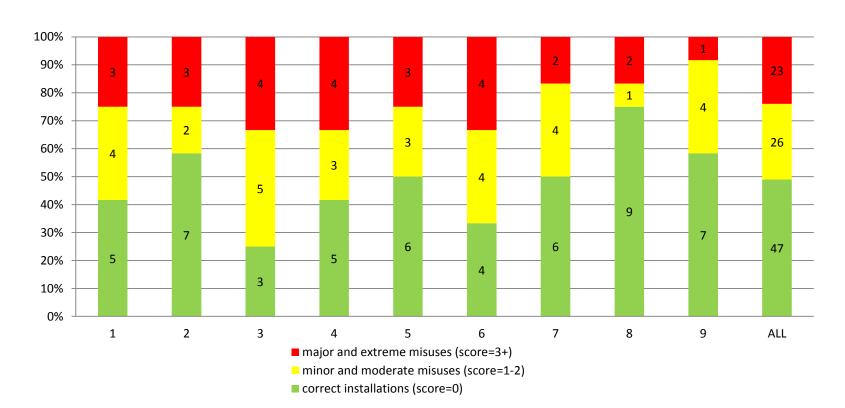

- Installer profiles
  - 6F 4M
  - Driving cars from YM 2006 2015
  - Live in houses (except 1)
  - All have at least 1 child younger than 4 years
  - All transporting children everyday (7/9) or once per week
     (2/9)
  - All know what ISOFIX is
  - 3 out of 9 know what Isize is
    - Rating CRS installation (from very difficult = to 1 very easy =5)
    - Rating confidence in their installation (very poor = 1 very sure =5)

## PRELIMINARY RESULTS

#### Installer performances:

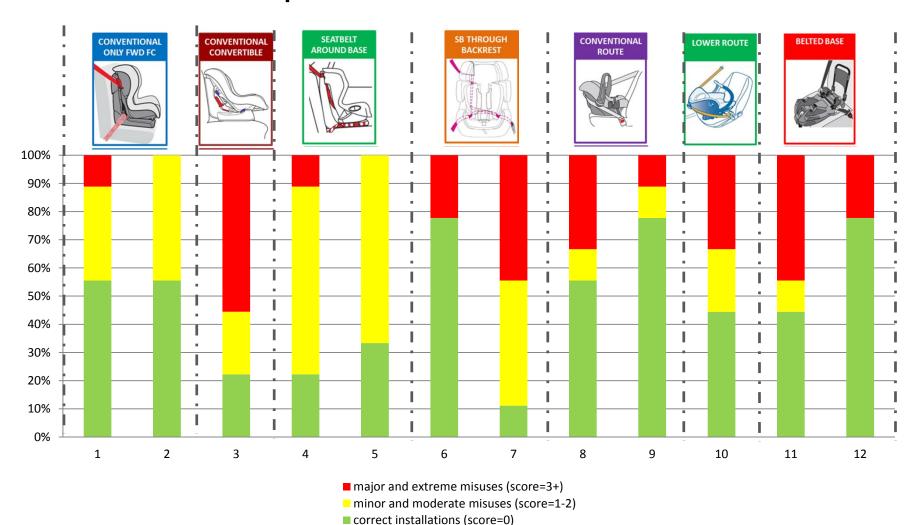

– Average time for all CRS = 5'

difficulty	3,1	4,1	3,3	2,9	2,8	3,1	3,6	3	3	2,9
confidence	3,1	3,7	3,2	2,9	3,4	3,6	3,6	4,1	3,75	3,1

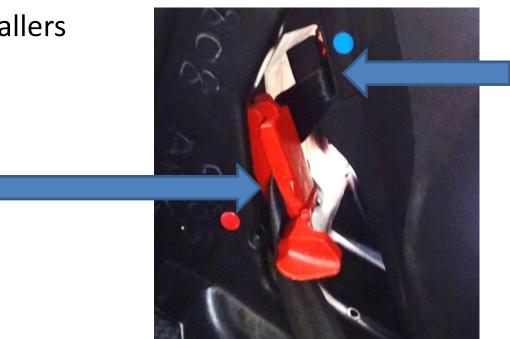

## PRELIMINARY RESULTS

Misuse rate per CRS

#### **OBSERVATIONS**

- FOCUS ON CRS n°3
  - Convertible CRS
    - Instructions were given to install it forward facing
    - Installed 5 times rearward facing
      - Not coded as a misuse (even if not what was required)
      - Only installation misuse coded according to the facing direction user instructions
    - Confusing for installers

#### **OBSERVATIONS**

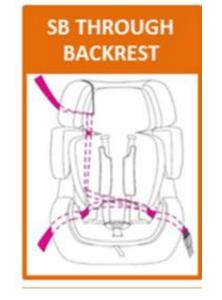

- FOCUS ON CRS n°4
  - Equipped with a seatbelt tensioner
    - People were not used to such a device and use it as a seatbelt guide only which lead to coding of misuse (severity = moderate)

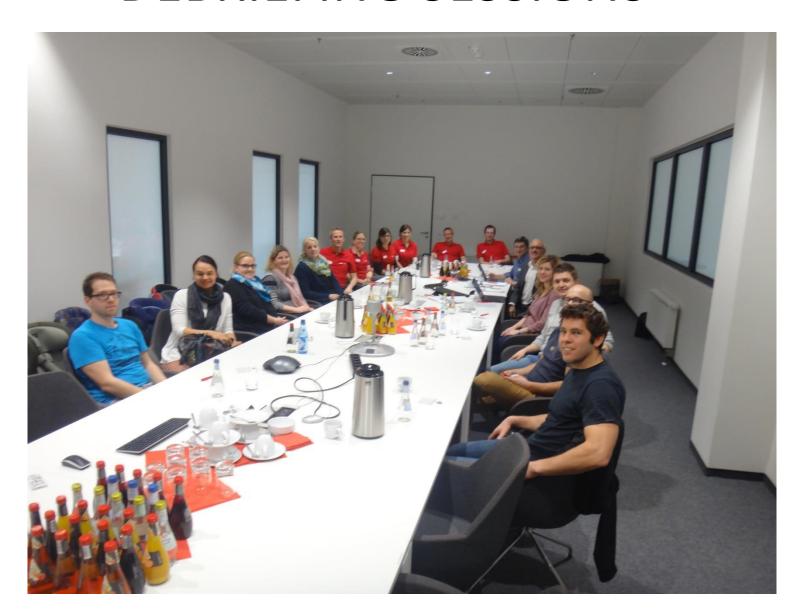

## **OBSERVATIONS**

- FOCUS ON CRS n°7
  - Only installed correctly one time
    - Not appreciated by none of the participant
    - (but the model is very popular in Europe)
  - In one case 10 minutes haven't been sufficient to have it installed (so coded in the study as not restrained)
  - Reasons for difficulties (possibility to give 3 reasons)
    - All installers complained about the seatbelt route difficulties
    - Pictograms and user manuals unclear and not really useful

# **DEBRIEFING SESSIONS**

# **RESULTS**

#### Feedback from installers

1	intuitive installation for CRS n°1							
2	Instruction may not be different between pictograms and user manual							
3	Views on the CRS should be adapted to the side you are installing it. (mirror view)							
4	Seat instability (cosis) does not reflect proctective impression							
5	Light seat did not give the impression of safety							
6	On line video of the installation of the system could be a plus value for helping the customers							
7	Minimum surface is required for seatbelt route indications							
	Blue dots are not sufficient to indicate seatbelt route							
	Red flags (more or less hidden) are not sufficient							
8	Installation are not checked when a system is sold so parents are never 100% sure							

#### RESULTS

#### **Feedback from Inspectors**

even with "car seats users" have made a lot of mistakes and severe ones

Inverted seatbelt route for baby shell customers like the base + shell systems

"Elsa" (=CRS n°7) has nearly never been properly installed

Labels need to be visible once the CRS is in the vehicle

base or baby shell - back of the CRS hidden by dashboard or front seat also true for FWD facing CRS - back is hidden by bench back

CRS n°1: was loved but interference with the car interior

CRS n°4: the seatbelt tensioner was not always used and not always correctly

lap belt was not always correctly routed

CRS n°6 was globally accepted and not so many misused

#### **FURTHER WORKS**

- Debriefing and work session with CLEPA members of the workshop on the following day (to be presented today)
- Call for similar workshop (using the same 12 CRS) in other countries (F,N,S,UK,...)
- Check database using all pictures
- Analyse:
  - reasons (good and bad)given by installers,
  - user manual and pictograms uses
- Update database with new input, make it anonymous and circulate it
