

Sweden would like to introduce also in the scope of AEBS the possibility to add the Big Animals as an object to detected by the system

Proposed new text:

2. The informal group shall address the following issues:
 - a. Define AEBS requirements for moving and stationary obstacles.
 - b. Define AEBS requirements for pedestrian detection.
 - c. Define AEBS requirements for large animal detection.

Justification:

Latest statistic report shows that in 2015 there was

- 48.000 accidents wit animals.
- 5 accident each hour .
- 800 injuries
- 56 severely injured
- 11 fatalities

So far this year, in three months 9000 accidents with deer ant 1009 accidents with Elks.

Add to that the cost for society for damage of properties and cost for police work (searching for wounded animals) Following map shows the police search mission after collision in the last! week.
