

## <Legform Impactor Area>

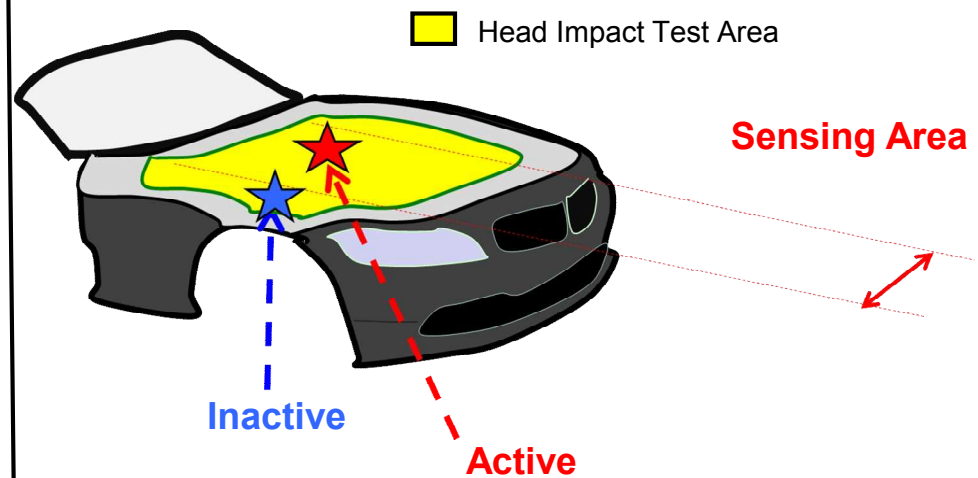

and

UNECE Reg.127.02

## <Sensing Area>

(Tests may be performed with the inactive condition at the discretion of the manufacturer.)

The Sensing Area is the area in the lateral direction of the vehicle within which activation of the deployable system is ensured in a vehicle-pedestrian impact.

In this Sensing Area, a head impact test may be performed with the deployable system being activated.

Outside of this Sensing Area, the test shall be performed with the deployable system being deactivated. (The Sensing Area differs from the leg impact test area.)
