Proposal on making Reference Calculation Sheet

Proposal

Making the GTR15 based reference calculation sheet on test report for emission and coastdown results.

- The use of calculation sheet is not mandatory, same as Gear Shift ACCESS tool. It can be used as reference.
- No specific idea for how to proceed. One idea is to create TF like Gear Shift TF and do round-robin check by TAA/OEMs.
- No specific idea for how can it be modified.

Background

- Each TAAs and OEMs have their own calculation sheet.
- Every type approval audit, all values shall be checked each other. It is very time consuming.
