

**Question from Netherlands, Mr. Rovers: January 2019**

...

A short question from my side... As I understand from the technical (EMC) people here in NL the current R.10-05 does not foresee/cover 48V systems. Will the (near) future R.10-06, as we've adopted last October in GRE, cover 48V systems?

For instance I saw that in the proposed Annex 9 (appendices 3 and 4, I believe) there is mention of 48V.

Maybe that also in a number of the updated references (for various standards, like ISO and CISPR...) the 48V will be covered/referred to, by R.10-06?
