

DETA Extension Unique Identifier (UI)

Leinfelden-Echterdingen, 2019/04/15

DETA – Unique Identifier

Clarification (1)

- Unique Identifier or “UI” is a code generated by DETA that is linked to one or more approvals of a product (vehicle, equipment or part).
- UI is used to identify and access the approval documentation of such products.
- A UI is generated automatically for each type approval number uploaded to DETA by a Contracting Party.
- A combined UI is generated on application of a Contracting Party having issued one of the type approvals for a product.
- UI can replace the approval markings required by UN Regulations.
- Different products may have the same UI only if the differences of the products are not certification relevant with respect to the approvals assigned to this UI.

DETA – Unique Identifier

Clarification (2)

- An extension of an existing approval due to a new series of amendments of the regulation will not automatically require a new UI if the product can already fulfil the extended legal requirements without modification. (In such a case the extended approval shares the UI of the existing regulation.)

DETA – Unique Identifier

Use Cases

- Create Unique Identifier for a new type approval (automatically)
- Create Unique Identifier for an existing type approval where no UI exists yet (manually)
- Create Unique Identifier for a combination of type approvals (manually)
- Show UIs for type approvals – as attributes in the table of documents
- Search type approvals for a given UI – integrated in the DETA tab

DETA – Unique Identifier

Access Permissions

- CPs (TAAs) – read access for all
- Manufacturers – Only Approval holders
