REVERSING MOTION
PROPOSALS FOR VRU PROXI
Agenda

1. Moveable test objects
2. Optimisation for semi trucks
Cone of vision of the camera can’t capture the whole patches

- Otherwise huge number of versions for camera support needed

A 0.15 m x 0.15 m area or the top of the test object shall be visible at least at one position on each test object.
Test objects in row 2 must be seen completely and camera must be placed in the rear

- View from backside of the cabin provides better view of VRU at solo semi truck rear
- Test objects in row 2 shall at least be XX % visible (e.g. 50%)
- Increase test objects to 100cm for semi trucks
- Move test objects 15cm to the back
