**Oggetto:** 36. SLR: Topic for next SLR meeting in January 2020

Hello Davide,

I just checked the GRE documents agreed by last session of WP.29. There I recognized that following amendments of UN R98, UN R112 and UN R113 were adopted:

**UN R98:**

"5.13. *Instead of requirements of this Regulation, headlamps may conform with requirements of the latest version of UN Regulation No. [149] as it relates to headlamps equipped with gas-discharge light sources.*"

**UN R112:**

"5.12. *Instead of requirements of this Regulation, headlamps may conform with requirements of the latest version of UN Regulation No. [149] as it relates to headlamps emitting an asymmetric passing beam.*"

**UN R113:**

"5.11. *Instead of requirements of this Regulation, headlamps may conform with requirements of the latest version of UN Regulation No. [149] as it relates to headlamps emitting a symmetric passing beam.*"

As long as there is the situation that only the 0 series of UN R149 is in force this statement is OK from my perspective. But when GRE is sending proposals for 01 or higher series for UN R149 to WP.29 we have to consider whether there is an amendment necessary like "requirements of the 0 series or higher on UN Regulation No. [149]".

The above amendments of UN R98, UN R112 and UN R113 were made thereby Canada can also in the future accept ECE approvals for headlamps.

Please be so kind and put it on the agenda of the next SLR meeting for discussion.

Thanks a lot for your support.

Mit freundlichen Grüessen / Best regards / Cordialement

**Thomas Goldbach**
